Specification and Design Methodology for Real-Time Embedded Systems Randall S. Janka, 2012-12-06 Specification and design methodology has seen significant growth as a research area over the last decade tracking but lagging behind VLSI design technology in general and the CAD industry in particular The commercial rush to market tries to leverage existing technology which fuels CAD design tool development Paralleling this is very active basic and applied research to investigate and move forward rational and effective methodologies for accomplishing digital design especially in the field of hardware software codesign It is this close relationship between industry and academia that makes close cooperation between researchers and practitioners so important and monographs like this that combine both abstract concept and pragmatic implementation deftly bridge this often gaping chasm It was at the IEEE ACM Eighth International Symposium on Hardware Software Codesign where I met the author of this monograph Dr Randall Janka who was presenting some of his recent dissertation research results on specification and design methodology or as he has so succinctly defined this sometimes ambiguous concept the tools and rules Where so many codesign researchers are trying to prove out different aspects of codesign and using toy applications to do so Dr Janka had developed a complete specification and design methodology and prototyped the infrastructure and proven its viability utility and effectiveness using a demanding real world application of a real time synthetic aperture radar imaging processor that was implemented with embedded parallel processors

Advanced Techniques for Embedded Systems Design and Test Juan C. López, Román Hermida, Walter Geisselhardt, 2013-03-09 As electronic technology reaches the point where complex systems can be integrated on a single chip and higher degrees of performance can be achieved at lower costs designers must devise new ways to undertake the laborious task of coping with the numerous and non trivial problems that arise during the conception of such systems On the other hand shorter design cycles so that electronic products can fit into shrinking market windows put companies and consequently designers under pressure in a race to obtain reliable products in the minimum period of time New methodologies supported by automation and abstraction have appeared which have been crucial in making it possible for system designers to take over the traditional electronic design process and embedded systems is one of the fields that these methodologies are mainly targeting The inherent complexity of these systems with hardware and software components that usually execute concurrently and the very tight cost and performance constraints make them specially suitable to introduce higher levels of abstraction and automation so as to allow the designer to better tackle the many problems that appear during their design Advanced Techniques for Embedded Systems Design and Test is a comprehensive book presenting recent developments in methodologies and tools for the specification synthesis verification and test of embedded systems characterized by the use of high level languages as a road to productivity Each specific part of the design process from specification through to test is looked at with a constant emphasis on behavioral methodologies Advanced Techniques for

Embedded Systems Design and Test is essential reading for all researchers in the design and test communities as well as system designers and CAD tools developers Design of Hardware/Software Embedded Systems Eugenio Villar Bonet, 2001 Este libro presenta los desaf os planteados por las nuevas y sumamente poderosas tecnolog as de integraci n de sistemas electr nicos que est n en la base de los cambios sociales hacia lo que llaman la Sociedad de la Informaci n en la que los dispositivos electr nicos se har n una parte incorporada de la vida diaria encajados en casi cada producto Es necesario un conocimiento cuidadoso de los desaf os para aprovechar la amplia gama de ocasiones ofrecidas por tales capacidades de integraci n y las correspondientes posibilidades de dise o de sistemas electr nicos From Specification to Embedded Systems Application Achim Rettberg, Mauro C. Fleming, D.I. Jones, 2014-07-22 Computer scientists have long appreciated that the relationship between algorithms and architecture is crucial Broadly speaking the more specialized the architecture is to a particular algorithm then the more efficient will be the computation The penalty is that the architecture will become useless for computing anything other than that algorithm This message holds for the algorithms used in real time automatic control as much as any other field These Proceedings will provide researchers in this field with a useful up to date reference source of recent developments High-Level System Modeling Ronald Waxman, Jean-Michel Bergé, Oz Levia, Jacques Rouillard, 2012-12-06 In system design generation of high level abstract models that can be closely associated with evolving lower level models provides designers with the ability to incrementally test an evolving design against a model of a specification Such high level models may deal with areas such as performance reliability availability maintainability and system safety Abstract models also allow exploration of the hardware versus software design space in an incremental fashion as a fuller detailed design unfolds leaving behind the old practice of hardware software binding too early in the design process Such models may also allow the inclusion of non functional aspects of design e g space power heat in a simulatable information model dealing with the system's operation This book addresses Model Generation and Application specifically in the following domains Specification modeling linking object data modeling behavior modeling and activity modeling Operational specification modeling modeling the way the system is supposed to operate from a user's viewpoint Linking non functional parameters with specification models Hybrid modeling linking performance and functional elements Application of high level modeling to hardware software approaches Mathematical analysis techniques related to the modeling approaches Reliability modeling Applications of High Level Modeling Reducing High Level Modeling to Practice High Level System Modeling Specification and Design Methodologies describes the latest research and practice in the modeling of electronic systems and as such is an important update for all researchers design engineers and technical managers working in design automation and circuit design Specification and Verification of Concurrent Systems Charles Rattray, 2013-11-11 This

volume contains papers presented at the BCS FACS Workshop on Specification and Verification of Concurrent Systems held on 6 8 July 1988 at the University of Stirling Scotland Specification and verification techniques are playing an increasingly important role in the design and production of practical concurrent systems. The wider application of these techniques serves to identify difficult problems that require new approaches to their solution and further developments in specification and verification The Workshop aimed to capture this interplay by providing a forum for the exchange of the experience of academic and industrial experts in the field Presentations included surveys original research practical experi ence with methods tools and environments in the following or related areas Object oriented process data and logic based models and specifi cation methods for concurrent systems Verification of concurrent systems Tools and environments for the analysis of concurrent systems Applications of specification languages to practical concurrent system design and development We should like to thank the invited speakers and all the authors of the papers whose work contributed to making the Workshop such a success We were particularly pleased with the international response to our call for papers Invited Speakers Pierre America Philips Research Laboratories University of Warwick Professor M Joseph David Freestone British Telecom Organising Committee Charles Rattray Dr Muffy Thomas Dr Simon Jones Dr John Cooke Professor Ken Turner Derek Coleman Maurice Naftalin Dr Peter Scharbach vi Preface We would like to aeknowledge the financial contribution made by SD Sysems Designers pie Camberley Surrey UML'99 - The Unified Modeling Language. Readings in Hardware/Software Co-Design Giovanni De Micheli,Rolf Ernst,Wayne Wolf,2002 This title serves as an introduction ans reference for the field with the papers that have shaped the hardware software co design since its inception in the early 90s Model-Based Engineering of Embedded Real-Time Systems Holger Giese,Gabor Karsai,Edward A. Lee,Bernhard Rumpe,Bernhard Schätz,2010-10-06 Thetopicof Model BasedEngineeringofReal TimeEmbeddedSystems brings together a challenging problem domain real time embedded systems and a lution domain model based engineering It is also at the forefrontof integrated software and systems engineering as software in this problem domain is an essential tool for system implementation and integration Today real time bedded software plays a crucial role in most advanced technical systems such as airplanes mobile phones and cars and has become the main driver and cilitator for innovation Development evolution veri cation con guration and maintenance of embedded and distributed software nowadays are often serious

challenges as drastic increases in complexity can be observed in practice Model based engineering in general and model based software development in particular advocates the notion of using models throughout the development and life cycle of an engineered system Model based software engineering reforces this notion by promoting models not only as the tool of abstraction but also as the tool for veri cation implementation testing and maintenance The application of such model based engineering techniques to embedded real time systems appears to be a good candidate to tackle some of the problems Applications and Theory of Petri Nets 2001 Jose-Manuel Colom, Maciej arising in the problem domain Koutny, 2003-05-15 This volume contains the proceedings of the 22nd International Conference on Application and Theory of Petri Nets The aim of the Petri net conferences is to create a forum for discussing progress in the application and theory of Petri nets Typically the conferences have 100 150 participants one third of these coming from industry while the rest are from universities and research institutions The conferences always take place in the last week of June This year the conference was organized jointly with the 2nd International Conference on Application of Concurrency to System Design ICACSD 2001 The two conferences shared the invited lectures and the social program The conference and a number of other activities are co ordinated by a steering committee with the following members G Balbo Italy J Billington Aust lia G De Michelis Italy C Girault France K Jensen Denmark S magai Japan T Murata USA C A Petri Germany honorary member W Reisig Germany G Rozenberg The Netherlands chairman and M Silva Spain Other activities before and during the 2001 conference included tool dem strations a meeting on XML Based Interchange Formats for Petri Nets tensive introductory tutorials two advanced tutorials on Probabilistic Methods in Concurrency and Model Checking and two workshops on Synthesis of Concurrent Systems and Concurrency in Dependable Computing The turrial notes and workshop proceedings are not published in these proceedings but copies are available from the organizers The Industrial Information Technology Handbook Richard Zurawski, 2018-10-03 The Industrial Information Technology Handbook focuses on existing and emerging industrial applications of IT and on evolving trends that are driven by the needs of companies and by industry led consortia and organizations Emphasizing fast growing areas that have major impacts on industrial automation and enterprise integration the Handbook covers topics such as industrial communication technology sensors and embedded systems The book is organized into two parts Part 1 presents material covering new and quickly evolving aspects of IT Part 2 introduces cutting edge areas of industrial IT The Handbook presents material in the form of tutorials surveys and technology overviews combining fundamentals and advanced issues with articles grouped into sections for a cohesive and comprehensive presentation The text contains 112 contributed reports by industry experts from government companies at the forefront of development and some of the most renowned academic and research institutions worldwide Several of the reports on recent developments actual deployments and trends cover subject matter presented to the public for the first time Models in System Design Jean-Michel Bergé, Oz Levia, Jacques Rouillard, 2012-12-06 Models in System Design tracks the general trend

in electronics in terms of size complexity and difficulty of maintenance System design is by nature combined with prototyping mixed domain design and verification and it is no surprise that today s modeling and models are used in various levels of system design and verification In order to deal with constraints induced by volume and complexity new methods and techniques have been defined Models in System Design provides an overview of the latest modeling techniques for use by system designers The first part of the book considers system level design discussing such issues as abstraction performance and trade offs There is also a section on automating system design The second part of the book deals with some of the newest aspects of embedded system design These include co verification and prototyping Finally the book includes a section on the use of the MCSE methodology for hardware software co design Models in System Design will help designers and researchers to understand these latest techniques in system design and as such will be of interest to all involved in embedded system Hardware Description Languages and their Applications Carlos Delgado Kloos, Eduard Cerny, 2013-06-05 In the past few decades Computer Hardware Description Languages CHDLs have been a rapidly expanding subject area due to a number of factors including the advancing complexity of digital electronics the increasing prevalence of generic and programmable components of software hardware and the migration of VLSI design to high level synthesis based on HDLs Currently the subject has reached the consolidation phase in which languages and standards are being increasingly used at the same time as the scope is being broadened to additional application areas This book presents the latest developments in this area and provides a forum from which readers can learn from the past and look forward to what the future holds
