Maloney, 2021-02 2023 AFHF Air Power History Book Prize Winner Emergency War Plan examines the theory and practice of American nuclear deterrence and its evolution during the Cold War Previous examinations of nuclear strategy during this time have for the most part categorized American efforts as massive retaliation and mutually assured destruction blunt instruments to be casually dismissed in favor of more flexible approaches or summed up in inflammatory and judgmental

terms like MAD These descriptors evolved into slogans and any nuanced discussion of the efficacy of the actual strategies withered due to a variety of political and social factors Drawing on newly released weapons effects information along with new information about Soviet capabilities as well as risky and covert espionage missions Emergency War Plan provides a completely new examination of American nuclear deterrence strategy during the first fifteen years of the Cold War the first such study since the 1980s Ultimately what emerges is a picture of a gargantuan and potentially devastating enterprise that was understood at the time by the public in only the vaguest terms but that was not as out of control as has been alleged and was more nuanced than previously understood

**Health & Height. V World Congress on Mountain Medicine and High Altitude Physiology**, 2003 **Earth Observation for Land and Emergency Monitoring** Heiko

Balzer, 2017-03-14 Earth Observation Science. EOS is the study of the global Earth-land-ocean-atmosphere system through observations. The principal tools for such studies are measurements from space since these provide the coverage of the planet that is necessary to capture the behaviour of the entire coupled system. In addition, surface observations and measurements from aircraft, balloons and sounding rockets provide valuable contributors to what are now termed integrated global observing systems. Coupled with models, the EOS measurement suites provide powerful tools for research into the factors controlling and changing the Earth system in which we live. The objectives of this book are to describe new methods and applications of satellite technology in the fields of land and emergency monitoring. It draws on new research outcomes from the European FP7 project GIONET. European Centre of Excellence in Earth Observation Research Training. GIONET combines industrial partners with universities and research institutes and this book provides a perspective on Earth Observation applications that is motivated by the cross-fertilisation of both sectors. Hence this book will find readers in both industry and academia. This book highlights a broad range of innovative uses of Earth Observation technology to support environmental management, decision making, crisis management and climate policies. It uses advanced concepts of multi-sensor image integration, multi-temporal analysis and synergies between data and models. This is a truly interdisciplinary subject that encompasses a range of applications in various fields which are discussed in detail throughout the text. If you are interested in remote sensing applications and looking for inspiration, this is the book for you.
