Maren,Craig T. Harston,Robert M. Pap,2014-05-10 Handbook of Neural Computing Applications is a collection of articles that deals with neural networks Some papers review the biology of neural networks their type and function structure dynamics and learning and compare a back propagating perceptron with a Boltzmann machine or a Hopfield network with a Brain State in a Box network Other papers deal with specific neural network types and

also on selecting configuring and implementing neural networks Other papers address specific applications including neurocontrol for the benefit of control engineers and for neural networks researchers Other applications involve signal processing spatio temporal pattern recognition medical diagnoses fault diagnoses robotics business data communications data compression and adaptive man machine systems One paper describes data compression and dimensionality reduction methods that have characteristics such as high compression ratios to facilitate data storage strong discrimination of novel data from baseline rapid operation for software and hardware as well as the ability to recognized loss of data during compression or reconstruction The collection can prove helpful for programmers computer engineers computer technicians and computer instructors dealing with many aspects of computers related to programming hardware interface networking engineering or design   Ecotoxicology Modeling James Devillers,2009-08-07 Ecotoxicology Modeling is a comprehensive and well documented text providing a collection of computational methods to the ecotoxicologists primarily interested in the study of the adverse effects of chemicals their mechanisms of action and or their environmental fate and behavior Avoiding mathematical jargon the book presents numerous case studies to enable the reader to understand the interest but also the limitations of linear and nonlinear models in ecotoxicology Written by an international team of scientists Ecotoxicology Modeling is of primary interest to those whose research or professional activity is directly concerned with the development and application of models in ecotoxicology It is also intended to provide the graduate and post graduate students with a clear and accessible text covering the main types of modeling approaches used in environmental sciences   **Computational Intelligence** David B. Fogel,Charles J. Robinson,2003-06-16 The definitive survey of computational intelligence from luminaries in the field Computational intelligence is a fast moving multidisciplinary field the nexus of diverse technical interest areas that include neural networks fuzzy logic and evolutionary computation Keeping up with computational intelligence means understanding how it relates to an ever expanding range of applications This is the book that ties it all together and puts that understanding well within your reach In Computational Intelligence The Experts Speak editors David B Fogel and Charles J Robinson present an unmatched compilation of expanded papers from plenary and special lecturers attending the 2002 IEEE World Congress on Computational Intelligence Collectively these papers provide a compelling snapshot of the issues that define the industry as observed by some of the top minds in the computational intelligence community In a series of topical chapters this comprehensive volume shows how current technology is shaping computational intelligence and it delivers eye opening insights into the field s future challenges The research detailed here covers an array of leading edge applications from coevolutionary robotics to underwater sensors and cognitive science in such areas as Self organizing systems Situation awareness Human machine interaction Automatic control Data recognition Computational Intelligence also includes introductions to each grouping of contributions that provide helpful tutorials and discuss important parallels between topics Whatever your role might be in this dynamic influential field this is the one reference that no

practitioner of computational intelligence should be without **Encyclopedia of Computer Science and Technology** Allen Kent,James G. Williams,2021-06-23 Volume 39 Supplement 24 Entity Identification to Virtual Reality in Driving Simulation Covering more than basic computer commands and procedures this encyclopaedia summarizes how technology has developed the future of computer programs and applications and the significance of computer components Following an introduction and overview there are approximately 750 to 800 entries **Methods and Applications of Intelligent Control** S.G. Tzafestas,2012-12-06 This book is concerned with Intelligent Control methods and applications The field of intelligent control has been expanded very much during the recent years and a solid body of theoretical and practical results are now available These results have been obtained through the synergetic fusion of concepts and techniques from a variety of fields such as automatic control systems science computer science neurophysiology and operational research Intelligent control systems have to perform anthropomorphic tasks fully autonomously or interactively with the human under known or unknown and uncertain environmental conditions Therefore the basic components of any intelligent control system include cognition perception learning sensing planning numeric and symbolic processing fault detection repair reaction and control action These components must be linked in a systematic synergetic and efficient way Predecessors of intelligent control are adaptive control self organizing control and learning control which are well documented in the literature Typical application examples of intelligent controls are intelligent robotic systems intelligent manufacturing systems intelligent medical systems and intelligent space teleoperators Intelligent controllers must employ both quantitative and qualitative information and must be able to cope with severe temporal and spatial variations in addition to the fundamental task of achieving the desired transient and steady state performance Of course the level of intelligence required in each particular application is a matter of discussion between the designers and users The current literature on intelligent control is increasing but the information is still available in a sparse and disorganized way 11th International Conference on Theory and Application of Soft Computing, Computing with Words and Perceptions and Artificial Intelligence - ICSCCW-2021 Rafik A. Aliev,Janusz Kacprzyk,Witold Pedrycz,Mo Jamshidi,Mustafa Babanli,Fahreddin M. Sadikoglu,2022-01-04 This book presents the proceedings of the 11th Conference on Theory and Applications of Soft Computing Computing with Words and Perceptions and Artificial Intelligence ICSCCW 2021 held in Antalya Turkey on August 23 24 2021 The general scope of the book covers uncertain computation decision making under imperfect information neuro fuzzy approaches natural language processing and other areas The topics of the papers include theory and application of soft computing computing with words image processing with soft computing intelligent control machine learning fuzzy logic in data mining soft computing in business economics engineering material sciences biomedical engineering and health care This book is a useful guide for academics practitioners and graduates in fields of soft computing and computing with words It allows for increasing of interest in development and applying of these paradigms in various real life fields **Neuromorphic Computing** Ali Akbar Firoozi,Ali

Asghar Firoozi,2024-07-26 This book delves into the transformative potential of neuromorphic computing within the field of civil engineering specifically focusing on its application to disaster management With the increasing frequency and severity of natural disasters traditional disaster management systems face significant challenges in prediction accuracy response time and effective resource allocation Neuromorphic computing inspired by the neural processes of the human brain offers a revolutionary approach to addressing these challenges Through an in depth exploration this book outlines the theoretical foundations of neuromorphic computing its integration into smart infrastructure and the development of advanced predictive models for natural disasters such as earthquakes floods and urban fires Additionally it examines the technical ethical and social considerations inherent in deploying these technologies alongside a vision for their future development The convergence of neuromorphic computing and civil engineering heralds a new era of enhanced resilience where more informed rapid and effective disaster management strategies are not just a possibility but a reality The book contributes to the discourse on leveraging cutting edge computing technologies to foster safer more resilient communities in the face of natural calamities   *The Explanatory Power of Models* Robert Franck,2013-11-11 Empirical research often lacks theory This book progressively works out a method of constructing models which can bridge the gap between empirical and theoretical research in the social sciences This might improve the explanatory power of models The issue is quite novel and it benefited from a thorough examination of statistical and mathematical models conceptual models diagrams and maps machines computer simulations and artificial neural networks These modelling practices have been approached through different disciplines The proposed method is partly inspired by reverse engineering The standard covering law approach is abandoned and classical induction restored to its rightful place It helps to solve several difficulties which impact upon the social sciences today for example how to extend an explanatory model to new phenomena how to establish laws and how to guide the choice of a conceptual structure The book can be used for advanced courses in research methods in the social sciences and in philosophy of science   **Hardware for Soft Computing and Soft Computing for Hardware** Nadia Nedjah,Luiza de Macedo Mourelle,2013-11-18 Single and Multi Objective Evolutionary Computation MOEA Genetic Algorithms GAs Artificial Neural Networks ANNs Fuzzy Controllers FCs Particle Swarm Optimization PSO and Ant colony Optimization ACO are becoming omnipresent in almost every intelligent system design Unfortunately the application of the majority of these techniques is complex and so requires a huge computational effort to yield useful and practical results Therefore dedicated hardware for evolutionary neural and fuzzy computation is a key issue for designers With the spread of reconfigurable hardware such as FPGAs digital as well as analog hardware implementations of such computation become cost effective The idea behind this book is to offer a variety of hardware designs for soft computing techniques that can be embedded in any final product Also to introduce the successful application of soft computing technique to solve many hard problems encountered during the design of embedded hardware designs Reconfigurable embedded designs for GAs ANNs
