Mammalian Neuroendocrinology Paul V. Malven, 2019-08-20 *Mammalian Neuroendocrinology* presents a concise examination of how the nervous and endocrine systems interact to regulate physiological processes. Selected experimental results are presented to illustrate the current understanding of neuroendocrine processes. Neural influences and endocrine feedback mechanisms related to the secretion of adenohypophyseal hormones are summarized for each hormone. The book's concise nature and readable style are highly suited for use as a graduate textbook. There are also chapters devoted to each of the following topics: neurohypophysis, pineal gland, adrenal medulla, hormones and behavior, and neuroendocrine immunology. Comparisons are made among species of mammals including laboratory rodents, domesticated ungulates, and primates. Agricultural and/or clinical aspects relevant to these topics are covered when appropriate. *Mammalian Neuroendocrinology* is excellent for students and professionals in neuroendocrinology, neuroscience, endocrinology, reproduction studies, and animal sciences. **Fundamentals of Comparative Vertebrate Endocrinology** I. Chester-Jones, P.M. Ingleton, J.G.

Phillips, 2013-12-14 Endocrinology as a discipline was a late arrival in the corpus of established subjects. Its growth in recent years has been prodigious, extending from morphology to molecular levels. Most of the major endocrine glands were noted by the early anatomists, although the adrenal glands were not described until 1563 by Bartholomaeus Eustachius. In 1574, on the other hand, elucidation of the function of these glands was extremely slow. Key work by A.A. Berthold in 1849, although overlooked at the time, showed that comb atrophy in castrated fowl was prevented by testis transplantation. The idea that glands produced substances reaching the bloodstream directly and not via excretory ducts stemmed from Claude Bernard, who first used the term internal secretion in 1855. The clinical observations of Thomas Addison at Guy's Hospital, published as a monograph in 1855, entitled *The Constitutional and Local Effects of Disease of the Suprarenal Capsules*, were seminal. However, the stimulus of this early research did not bring immediate widespread further investigations. Upon the discovery of secretin in 1902, Bayliss and Starling considered the term internal secretion to be clumsy, and the term hormone was coined from the Greek *hormō* to excite or arouse, and it was first used by Starling in his Croonian of 1905. *Adrenal Disease in Childhood* I. A. Hughes, Adrian J. L. Clark, 2000-01-01 Adrenal disease in children poses an immensely difficult diagnostic and management problem for the paediatrician in view of the large number of rare pathologies that may present in this way. This volume brings together the expertise of the acknowledged leaders in specific adrenal disorders to provide a readily accessible text that combines a detailed description of the molecular origins of these diseases as they are currently understood with a unique account of the clinical features and therapeutic options. Beginning with disorders that primarily affect adrenal development and progressing towards the defects that interfere with steroid production, the reader gains considerable insight into the normal physiology of the adrenal cortex, particularly as revealed by clinical disorders. The major contributions of modern biochemistry and molecular genetics in our current understanding are visible throughout, providing a unique overview of

adrenocortical biology This book is of great interest to general pediatricians paediatric endocrinologists adult endocrinologists clinical geneticists and basic scientists working in areas such as developmental biology and molecular steroidogenesis

Progress in Radiopharmacology 3 P.H. Cox, 2012-12-06 The publication of this volume which is based upon presentations made to the Third European Symposium on Radiopharmacology at Noordwijkerhout April 22-24 1982 is indicative of the continued interest in this sub branch of Nuclear Medicine The transactions of the first two meetings were published as Progress in Radiopharmacology Volumes 1 and 2 by Elsevier North Holland Bio medical Press We are particularly pleased to have reached an agreement with Martinus Nijhoff Publishers to include Progress in Radiopharmacology 3 in the series Developments in Nuclear Medicine This not only ensures the continuity of the series but by including it in a series of Nuclear Medical Monographs the availability of the text to more general readers for background information is greatly enhanced As with the previous two volumes each of the three topics has been so treated as to relate the biodistribution of the radiopharmaceuticals to normal and pathophysiological conditions to provide background information for the practising nuclear medical specialist Special attention has been given to European activities but these have been clearly placed in context in relation to developments from outside Europe The Third European Symposium on Radiopharmacology was held under the auspices of the European Joint Committee on Radiopharmaceuticals of the European Nuclear Medicine Society and the Society of Nuclear Medicine Europe Solco Nuclear Basle provided both financial and material support and I would like to thank Dr M de Schrijver Mr I Waser and Mrs E Rufenacht for their continued help and encouragement

Reproductive Processes and Contraception Kenneth W. McKerns, 2013-03-13 This monograph represents the eighth sponsored by the International Society for Biochemical Endocrinology The topics should be of interest to basic research scientists medical practitioners and students of reproductive biology It complements our monograph published in 1979 on Structure and Function of the Gonadotropins The monograph is organized in ten topic areas relative to the general theme of reproduction and contraception There are several chapters in each area Obviously all aspects of each area could not be covered An attempt was made to seek interesting basic research ideas and concepts that might in the future be applicable to fertility regulation The topics are interactions in gonadotropin regulation GnRH analogues as contraceptive agents receptors in cellular localization of hormones uterine and mammary receptors germ cell regulation and secretory proteins control mechanisms and metabolic regulations hCG peptides and anti sera as antifertility agents iutization oocyte maturation and early pregnancy steroids and cell growth and finally prostaglandins and cell function The studies encompass many disciplines and techniques in anatomy physiology biochemistry and endocrinology in animals and humans both in vitro and in vivo A conference of contributors was held in Maine at the Asticou Inn in Northeast Harbor during the week of September 9-13 1979 The chapters as written for the monograph were presented for discussion by the participants who were selected for their knowledge of and contributions to this area of scientific investigation

Peter O. Kohler, Richard M. Jordan, Richard M. Jordan (M.D.), 1986 **Adrenergic Activators and Inhibitors**, 2012-12-06 Not much more than a decade has passed since the appearance of the outstanding handbook Catecholamines edited by BLASCHKO and MUSCHOLL in the series Handbook of Experimental Pharmacology However this extremely well organized volume dealt mainly with the origin molecular actions and fate of the naturally occurring catecholamines It was felt that a separate volume should be dedicated to the remarkable and exciting progress made in the field of agents influencing the adrenergic system both in physiologic and pharmacologic respect The editor of the present volume considers himself lucky to have been able to persuade a number of eminent specialists to collaborate The main concept of the present handbook is a systematic approach to the various effects of adrenergic activators and inhibitors starting with the chemistry and structure activity relationship followed by the evaluation of adrenergic activators and inhibitors and discussing their mode of action The most voluminous part is the chapter dealing with the systemic pharmacology of these agents analyzing the effects on the central nervous system on the autonomic nervous system on the cardiovascular the respiratory the digestive the endocrine system on the skeletal muscle and on metabolism Kinetics and bio transformation further toxic effects are discussed in the following chapters A special chapter on clinical features concludes the monograph **Endocrine Pharmacology**

P. J. Bentley, 1980 A 1981 treatment of the action and uses of the hormones and drugs that influence endocrine functions in the body as seen by a pharmacologist The book includes a description of available drug preparations and expected therapeutic responses and an examination of their side effects and interactions with other drugs Special emphasis is placed on how such drugs and hormones work and on how their biological effects are related to their chemical structures The physiological background to the practical significance of such substances is given for both a healthy and a diseased state The book assumes little prior knowledge of endocrinology or pharmacology **Tumors of the Adrenal**

David L. Page, Ronald A. DeLellis, Aubrey J. Hough, 1986 **Hormones and Energy Metabolism** D. M.

Klachko, 2013-11-11 The Twelfth Annual Midwest Conference on Endocrinology and Metabolism continued the tradition of selecting a topic of interest to a wide variety of scientists with interests in biology. The conference on Hormones and Energy Metabolism was dedicated appropriately to Dr Samuel A Brody a leader in research in this field as described by Professor Johnson in this volume. A particular feature of these conferences has been the large proportion of time devoted to discussion of each paper and the published proceedings have included edited transcripts of these discussions. Unfortunately due to malfunction of the recording system major portions of the discussions were lost and despite much effort insufficient was salvageable to be meaningful and helpful. Consequently the editors decided to omit completely the discussions except for a communication provided by Dr Woodside. We again express our appreciation to the staff of Conferences and Short Courses University of Missouri Columbia Extension Division and especially to Dr John Swanson who helped organize the multitude of administrative details to Mrs Linda Bennett CPS for her continuing excellent efforts in typing the manuscripts for publication and particularly to the sponsors without whom there would have been no conference. Ralph R Anderson, Murray Heimberg, David Klachko, vii CONTENTS Dedication Dr Samuel A Brody xi Brody Memorial Lecture Same Aspects of Energy Coupling by Mitochondria **Calcium and Cellular Secretion** Ronald P. Rubin, 2012-12-06 Since the publication of my previous monograph in 1974 important progress has been made in the broad area of calcium research particularly as it pertains to secretory phenomena. The significant advance in methodology while widening the scope of our knowledge has caused research in this particular area to become more and more specialized. It has therefore become increasingly difficult for researchers to consider and evaluate work outside their own areas of specialization and to comprehend the field from a broad perspective. While many valuable reviews on the importance of calcium in cellular function are being produced they have not attempted to pull together all of the existing knowledge into a more general narrative. This volume brings together experimental data and theories from diverse sources and attempts to synthesize into a broad conceptual framework the massive amount of specialized information that presently exists in the general area of calcium metabolism and the secretory process. It is impossible in a book of this length to discuss specific references in detail and still maintain readability so generalizations must be made. Biological Rhythms Jurgen Aschoff, 2013-03-09 Interest in biological rhythms has been traced back more than 2500 years to Archilochus the Greek poet who in one of his fragments suggests *i VWO KE o olos pv J* *tos txv pW7rOVS XH* recognize what rhythm governs man. Aschoff 1974 Reference can also be made to the French student of medicine J J Virey who in his thesis of 1814 used for the first time the expression *horloge vivante* living clock to describe daily rhythms and to D C W Hufeland 1779 who called the 24 hour period the unit of our natural chronology. However it was not until the 1930s that real progress was made in the analysis of biological rhythms and Erwin Bunning was encouraged to publish the first and still not outdated monograph in the field in 1958. Two years later in the middle of exciting discoveries we took a breather at the Cold Spring Harbor Symposium on Biological Clocks. Its survey on rules considered valid at that time.

and Pittendrigh's anticipating view on the temporal organization of living systems made it a milestone on our way from a more formalistic description of biological rhythms to the understanding of their structural and physiological basis

two important questions considering the mass of relevant literature available is there any necessity for a new series of books and considering the flood of comparable meetings is there any point in workshops of this nature and their publication In order to deal with such questions adequately much more space would be needed than is available in a foreword Thus the answers must remain rather superficial and of course rather subjective To simplify the issue the question of publication can be narrowed down to two factors the financial risk undertaken by the publisher and the scientific risk borne by the editor If the book is good with respect to layout and content it will be a success nothing will be lost the people involved will enhance their reputation We are left with the question of the usefulness of workshops Without doubt it is indeed a useful procedure for experts to come together in an atmosphere of harmony and freedom from external pressures and time limitations to discuss a well defined theme Whether in agreement or disagreement a fair and open forum can be expected for a variety of contributions

The Release of Catecholamines from Adrenergic Neurons David M. Paton, 2016-06-06 The Release of Catecholamines from Adrenergic Neurons focuses on the processes involved in determining the release of catecholamines from neurons noting the influence of alcohols analgesics and acids in the release The selection first discusses biochemical and ultrastructural studies of the mechanism of release as well as release of constituents of noradrenergic vesicles upon nerve stimulation constituents of noradrenergic vesicles and mechanism of release The book then takes a look at the role of calcium in catecholamine release from adrenergic nerve terminals and presynaptic adrenoceptors and regulation of release Topics include calcium dependent versus calcium independent noradrenaline release differences between the presynaptic and postsynaptic alpha adrenoceptors and influence of neuronal uptake of noradrenaline on the negative feedback mechanism mediated by presynaptic alpha adrenoceptors The publication reviews presynaptic muscarine receptors and inhibition of release including muscarinic inhibition of noradrenaline release evoked by electrical stimulation of sympathetic nerves effect of muscarinic agonists on noradrenaline releasing procedures independent of calcium ions and possible physiological and pharmacological significance of the muscarinic inhibitory mechanism The text also ponders on the role of prostaglandins cyclic adenosine monophosphate analgesics peptides acids anesthetics and alcohols in the release The selection is a dependable reference for readers interested in the study of the release of catecholamines from adrenergic neurons

Development, Maturation, and Senescence of Neuroendocrine Systems Colin G. Scanes, 2012-12-02 Development Maturation and Senescence of Neuroendocrine Systems A Comparative Approach discusses the various phases of the aging continuum of neuroendocrine systems This book explores the fundamental and physiological component of animals which is an essential contributor to senescence Organized into three parts encompassing 21 chapters this volume starts with a discussion of the concept of neurosecretory neuron that was introduced by Ernst Scharrer in 1928 This book discusses the challenges in the study of the development of the neuroendocrine system in insects with a focus on Lepidoptera Other chapters consider the neuroendocrine mechanisms that

control the physiological processes in crustaceans The reader is then introduced to the major neurohemal structures in crustaceans including the sinus gland the pericardial organs and the post commissural organs The final chapter discusses the two brain systems that show impact of endogenous steroids that account for subsets of senescent changes This book is a valuable resource for neurobiologists molecular biologists and immunologists
