Nuclear Techniques in Diagnostic Medicine Peter P. van Rijk,2012-12-06 This book was conceived by Professor K H Ephraim the former director of the Institute for Nuclear Medicine of the University Hospital of Utrecht Unfortunately due to a serious illness he was not able to finish the work he started He is however very pleased to know that the book is nevertheless being published In principle the volume consists of two parts The first is dedicated to basic science and technology in nuclear medicine It provides the data which are necessary to a clear understanding of the possibilities and limitations of investigations which make use of radioactive materials The second part of the book covers those disciplines in medicine in which nuclear medicine can be of help in solving certain clinical problems Each chapter can be read separately even without thorough knowledge of the first part of the book The contributors to this book come from both Europe and North America Each of them has written his chapter out of long standing personal interest in his particular field of nuclear medicine This book will be of value to a wide variety of professionals It is of interest not only to clinicians of various

specialties but also to diagnostic professionals i.e. radiologists and nuclear medicine clinicians. Last but not least it will be of use to physicians in training.

Laboratory Safety Theory and Practice Anthony Fuscaldo, 2012-12-02

Laboratory Safety Theory and Practice focuses on theoretical aspects of the hazards the students, technicians and scientists encounter in the laboratory. It presents methods of risk assessment that can be applied to technologies as they are translated from the scientist's mind to the laboratory bench. It is organized into three sections designated as General Laboratory Safety, Biological Laboratory Safety and Medical and Psychological Factors. The first section encompassing three chapters discusses hazards found in almost all laboratories: pertinent safety theories and practices, ubiquitous compounds that are either toxic or carcinogenic and guidelines for their use and radiation hazards. Chapters 4 to 7 focus on the safety in the biological laboratory. Discussions on a relatively complex group of viruses, approach to recombinant DNA research and awareness on the possible hazards associated with the field are included in this book. Chapters 6 and 7 present design and function of biohazard laboratories and the hazards relating to laboratory animals. The final section discusses medical surveillance of persons at risk and the psychological factors involved in accident control. It presents a comprehensive list of chemical agents, their sources, subsequent physical effects and the accepted mode of medical surveillance. Various genetic screening tests and their potential use for the evaluation of presumptive and actual mutagens are also covered. This book is ideal for safety and design engineers, students, technicians and scientists.
