Handbook Of Receptors And Channels:

Handbook of Neurotoxicology Edward J. Massaro, 2001-11-12 Neurotoxicology is a broad and burgeoning field of research. Its growth in recent years can be related in part to increased interest in and concern with the fact that a growing number of anthropogenic agents with neurotoxic potential including pesticides, lead, mercury, and the polycyclic byproducts of combustion and industrial production continue to be spewed into and accumulate in the environment. In addition, there is great interest in natural products including toxins as sources of therapeutic agents. Indeed, it is well known that many natural toxins of broadly differing structure produced or accumulated for predatory or defensive purposes and toxic agents accumulated incidentally by numerous species function to perturb nervous tissue. Components of some of these toxins have been shown to be useful therapeutic agents and/or research reagents. Unfortunately, the environmental accumulation of some neurotoxicants of anthropogenic origin, especially pesticides and metals, has resulted in incidents of human poisoning, some of epidemic proportion and high levels of morbidity and mortality. Furthermore, an increasing incidence of neurobehavioral disorders, some with baffling symptoms, is confronting clinicians. It is not clear whether this is merely the result of increased vigilance and/or improved diagnostics or a consequence of improved health care. In any case, the role of exposure to environmental and occupational neurotoxicants in the etiology of these phenomena, as well as neurodegenerative diseases, is coming under increasing scrutiny and investigation. **Handbook of Receptors and Channels Series** Stephen J.

Peroutka, 1994 **Handbook of Ion Channels** Jie Zheng, Matthew C. Trudeau, 2015-02-25 The New Benchmark for Understanding the Latest Developments of Ion Channels. Ion channels control the electrical properties of neurons and cardiac cells; mediate the detection and response to sensory stimuli and regulate the response to physical stimuli. They can often interact with the cellular environment due to their location at the surface of cells. **Handbook of Receptors and Channels** Stephen J. Peroutka, 1994 **Handbook of Parathyroid Diseases** Aliya A. Khan, MD, Orlo H. Clark, 2012-02-23 The Handbook on Parathyroid Diseases presents a comprehensive and concise overview of our current knowledge in the area of parathyroid function, hormone regulation, and disease states. The Handbook educates the reader using a case-based approach, presenting current evidence in the field. The material is presented in an easy-to-read and understandable language and uses a plethora of tables and text boxes where possible. Complex concepts are conveyed in simple and clear language. Local Control of Microvascular Perfusion Michael Hill, Michael J. Davis, 2012 Local control of microvascular perfusion refers to the ability of individual tissues to maintain a relative constancy of hemodynamics in the face of changing perfusion pressure while meeting metabolic demands appropriately The regulation of local blood flow or autoregulation and its underlying mechanisms have been a subject of considerable interest for over 100 years Particular focus has been placed on the acute interaction of myogenic pressure induced and metabolic local production of vasodilator metabolites parameters and how they interact with flow shear stress dependent and conduction based mechanisms to produce integrated local vascular network responses for example as seen during reactive and functional hyperemia This monograph discusses each of these vasoregulatory phenomena while also considering evidence for their underlying cellular mechanisms Further an attempt is made to integrate the information into complex in vivo situations and consider their relevance to pathophysiological situations

Ion Channels David J. Aidley, Peter R. Stanfield, 1996-08-13 Ion channels are crucial components of living cells Situated in the cell s membranes they allow particular ions to pass from one side of the membrane to the other In recent years the patch clamp technique has allowed the activity of individual channels to be measured and recombinant DNA technology has led to fascinating detail on their structure Together these technical advances have produced a great flowering of knowledge and understanding about the subject itself leading to further breakthroughs in science and medicine Ion Channels provides an introduction to this scientific endeavour It emphasises the molecular structure of channels as determined by gene cloning technology This knowledge illuminates discussions of the permeability and selectivity of channels their gating and modulation their responses to drugs and toxins and the human diseases caused when they do not function properly
