*Survival Analysis: State of the Art* John P. Klein, P.K. Goel, 2013-03-09

Survival analysis is a highly active area of research with applications spanning the physical engineering biological and social sciences In addition to statisticians and biostatisticians researchers in this area include epidemiologists reliability engineers demographers and economists The economists survival analysis by the name of duration analysis and the analysis of transition data We attempted to bring together leading researchers with a common interest in developing methodology in survival analysis at the NATO Advanced Research Workshop The research works collected in this volume are based on the presentations at the Workshop Analysis of survival experiments is complicated by issues of censoring where only partial observation of an individual's life length is available and left truncation where individuals enter the study group if their life lengths exceed a given threshold time Application of the theory of counting processes to survival analysis as developed by the Scandinavian School has allowed for substantial advances in the procedures for analyzing such experiments The increased use of computer intensive solutions to inference problems in survival analysis in both the classical and Bayesian settings is also evident throughout the volume Several areas of research have received special attention in the volume

*Bayesian Thinking, Modeling and Computation* ,2005-11-29 This volume describes how to develop Bayesian thinking modelling and computation both from philosophical methodological and application point of view It further describes parametric and nonparametric Bayesian methods for modelling and how to use modern computational methods to summarize inferences using simulation The book covers wide range of topics including objective and subjective Bayesian inferences with a variety of applications in modelling categorical survival spatial spatiotemporal Epidemiological software reliability small area and micro array data The book concludes with a chapter on how to teach Bayesian thoughts to nonstatisticians Critical thinking on causal effects Objective Bayesian philosophy Nonparametric Bayesian methodology Simulation based computing techniques Bioinformatics and Biostatistics
