Handbook Vol 7 Powder Metal Technologies And Applications:

Handbook of Non-Ferrous Metal Powders Oleg D Neikov, N. A. Yefimov, Stanislav Naboychenko, 2009-02-24 The manufacture and use of the powders of non ferrous metals has been taking place for many years in what was previously Soviet Russia and a huge amount of knowledge and experience has built up in that country over the last forty years or so. Although accounts of the topic have been published in the Russian language no English language account has existed until now. Six prominent academics and industrialists from the Ukraine and Russia have produced this highly detailed account which covers the classification, manufacturing methods, treatment and properties of the non ferrous metals: aluminium, titanium, magnesium, copper, nickel, cobalt, zinc, cadmium, lead, tin, bismuth, noble metals and earth metals. The result is a formidable reference source for those in all aspects of the metal powder industry. Covers the manufacturing methods, properties and importance of the following metals: aluminium, titanium, magnesium, copper, nickel, cobalt, zinc, cadmium, noble metals, rare earth metals, lead, tin and bismuth. Expert Russian team of authors, all very experienced. English translation and update of book previously published in Russian.

Handbook of Residual Stress and Deformation of Steel George E. Totten, 2002 Annotation: Examines the factors that contribute to overall steel deformation problems. The 27 articles address the effect of materials and processing, the measurement and prediction of residual stress and distortion and residual stress formation in the shaping of materials during hardening processes and during manufacturing processes. Some of the topics are the stability and relaxation behavior of macro and micro residual stresses, stress determination in coatings, the effects of process equipment design, the application of metallographic thermo-mechanics to quenching, inducing compressive stresses through controlled shot peening and the origin and assessment of residual stresses during welding and brazing.
