Handbook Of Multimedia Information Management:

The Handbook of Multimedia Information Management William I. Grosky, Ramesh Jain, Rajiv Mehrotra, 1997

Handbook of Multimedia Computing Borko Furht, 1998-09-29 Multimedia computing has emerged as a major area of research. Coupled with high speed networks, multimedia computer systems have opened a spectrum of new applications by combining a variety of information sources such as voice, graphics, animation, images, audio, and video. *Handbook on Multimedia Computing* provides a comprehensive resource on advanced topics in this field, considered here as the integration of four industries: computer communication, broadcasting, entertainment, and consumer electronics. This indispensable reference compiles contributions from 80 academic and industry leaders, examining all the major subsets of multimedia activity. Four parts divide the text: Basic Concepts and Standards introduces basic multimedia terminology, taxonomy, and concepts, including multimedia objects, user interfaces, and standards; Multimedia Retrieval and Processing Techniques addresses various aspects of audio, image, and video retrieval, indexing, and processing techniques and systems; Multimedia Systems and Techniques covers critical multimedia issues such as multimedia synchronization, operating systems for multimedia, multimedia databases, storage organizations, and processor architectures; Multimedia Communications and Networking discusses networking issues such as quality of service, resource management, and video transport. An indispensable reference, *Handbook on Multimedia Computing* covers every aspect of multimedia applications and technology. It gives you the tools you need to understand and work in this fast-paced, continuously changing field.

[The Handbook of Multimedia Information Management](#) William I. Grosky, Ramesh Jain, Rajiv Mehrotra, 1997. What if there are several versions or ones in different languages? What parameters do you apply when sorting graphic images? How do you store and retrieve this massive amount of information quickly and easily? In *The Handbook of Multimedia Information Management*, a team of experts from all over the world tackles these and other questions. For database designers, developers, and analysts, or for anyone looking to catalog their exploding multimedia holdings, this book is required reading.

[Multimedia Information Retrieval](#) Roberto Raieli, 2013-07-31. Novel processing and searching tools for the management of new multimedia documents have been developed. Multimedia Information Retrieval (MIR) is an organic system made up of Text Retrieval (TR), Visual Retrieval (VR), Video Retrieval (VDR), and Audio Retrieval (AR) systems. So that each type of digital document may be analysed and searched by the elements of language appropriate to its nature, search criteria must be extended. Such an approach is known as the Content Based Information Retrieval (CBIR) and is the core of MIR. This novel content-based concept of information handling needs to be integrated with more traditional semantics. Multimedia Information Retrieval focuses on the tools of processing and searching applicable to the content-based management of new multimedia documents. Translated from Italian by Giles Smith, the book is divided into two parts. Part one discusses MIR and related theories and puts forward new methodologies; part two reviews various experimental and operating MIR systems and presents technical and practical conclusions. Gives a

complete organic picture of MIR and CBIR Proposes a novel conceptualisation around the ideas of Information Retrieval IR and digital document management in the context of Library and Information Science LIS Relevant for both library and information science and information technology specialists *Visual and Multimedia Information Management* Xiaofang Zhou, Pearl Pu, 2013-11-11 Current research in Visual Database Systems can be characterized by scalability multi modality of interaction and higher semantic levels of data Visual interfaces that allow users to interact with large databases must scale to web and distributed applications Interaction with databases must employ multiple and more diversified interaction modalities such as speech and gesture in addition to visual exploitation Finally the basic elements managed in modern databases are rapidly evolving from text images sound and video to compositions and now annotations of these media thus incorporating ever higher levels and different facets of semantics In addition to visual interfaces and multimedia databases Visual and Multimedia Information Management includes research in the following areas Speech and aural interfaces to databases Visualization of web applications and database structure Annotation and retrieval of image databases Visual querying in geographical information systems Video databases and Virtual environment and modeling of complex shapes Visual and Multimedia Information Management comprises the proceedings of the sixth International Conference on Visual Database Systems which was sponsored by the International Federation for Information Processing IFIP and held in Brisbane Australia in May 2002 This volume will be essential for researchers in the field of management of visual and multimedia information as well as for industrial practitioners concerned with building IT products for managing visual and multimedia information
