Fundamental Electron Interactions with Plasma Processing Gases Loucas G. Christophorou, James K. Olthoff, 2012-12-06 This volume deals with the basic knowledge and understanding of fundamental interactions of low energy electrons with molecules It provides an up to date and comprehensive account of the fundamental interactions of low energy electrons with molecules of current interest in modern technology especially the semiconductor industry The primary electron molecule interaction processes of elastic and inelastic electron scattering electron impact ionization electron impact dissociation and electron attachment are discussed and state of the art authoritative data on the cross sections of these processes as well as on rate and transport coefficients are provided This fundamental knowledge has been obtained by us over the last eight years through a critical review and comprehensive assessment of all available data on low energy electron collisions with plasma processing gases which we conducted at the National Institute of Standards and Technology NIST Data from this work were originally published in the Journal of Physical and Chemical Reference Data and have been updated and expanded here The fundamental electron molecule interaction processes are discussed in Chapter 1 The cross sections and rate coefficients most often used to describe these interactions are defined in Chapter 2 where some recent advances in the methods employed for their measurement or calculation are outlined The methodology we adopted for the critical evaluation synthesis and assessment of the existing data is described in

Chapter 3 The critically assessed data and recommended or suggested cross sections and rate and transport coefficients for ten plasma etching gases are presented and discussed in Chapters 4 5 and 6

Medical Coatings and Deposition Technologies David Glocker,Shrirang Ranade,2016-06-24 Medical Coatings and Deposition Technologies is an important new addition to the libraries of medical device designers and manufacturers Coatings enable the properties of the surface of a device to be controlled independently from the underlying bulk properties they are often critical to the performance of the device and their use is rapidly growing This book provides an introduction to many of the

most important types of coatings used on modern medical devices as well as descriptions of the techniques by which they are applied and methods for testing their efficacy. Developers of new medical devices and those responsible for producing them will find it an important reference when deciding if a particular functionality can be provided by a coating and what limitations may apply in a given application. Written as a practical guide and containing many specific coating examples and a large number of references for further reading, the book will also be useful to students in materials science engineering with an interest in medical devices. Chapters on antimicrobial coatings as well as coatings for biocompatibility, drug delivery, radiopacity, and hardness are supported by chapters describing key liquid coating processes, plasma-based processes, and chemical vapor deposition. Many types of coatings can be applied by more than one technique, and the reader will learn the tradeoffs given the relevant design, manufacturing, and economic constraints. The chapter on regulatory considerations provides important perspectives regarding the marketing of these coatings and medical devices.

Handbook of Optical Properties Rolf E. Hummel, Karl H. Guenther, 1995-02-24

Thin Films for Optical Coating emphasizes the applications of thin films, deposition of thin films, and thin film characterization. Unlike monographs on this subject, this book presents the views of many expert authors. Individual chapters span a wide arc of topics within this field of study. The book offers an introduction to usual and unusual applications of optical thin films, treating in a more qualitative way general topics such as anticounterfeiting coatings, decorative coatings, light switches, contrast enhancement coatings, multiplexers, optical memories, and more. Contributors review thin film media for optical data storage, UV broadband and narrow band filters, and optically active thin film coatings. Ion beam sputtering and magnetron sputtering deposition methods are described in detail. Characterization techniques are provided, including Raman spectroscopy and absorption measurements. The book also offers theories on light scattering of thin dielectric films and the electromagnetic properties of nanocermet thin films. This reference incorporates recent research by the individual authors with their views of current developments in their respective fields. Of particular interest to the reader will be an assessment of the historical developments of thin film physics, written by one of the fathers of thin film technology, Professor M. Auer.

The Foundations of Vacuum Coating Technology Donald M. Mattox, D. M. Mattox, 2003-04-16

The Foundations of Vacuum Coating Technology is a concise review of the developments that have led to the wide variety of applications of this technology. This book is a must-have for materials scientists and engineers working with vacuum coating in the invention of new technologies or applications in all industries. With over 370 references, this is an excellent starting point for those who don't want to reinvent the wheel. In particular, the book is a

valuable reference for those interested in researching proposed or existing patents This unique book provides a starting point for more in depth surveys of past and recent work in all aspects of vacuum coating The author uses his extensive knowledge of the subject to draw comparisons and place the information into the proper context This is particularly important for the patent literature where the terminology does not always match industry jargon A section of acronyms for vacuum coating and glossary of terms at the end of the book are critical additions to the information every reader needs

Database Needs for Modeling and Simulation of Plasma Processing National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Panel on Database Needs in Plasma Processing, 1996-10-21 In spite of its high cost and technical importance plasma equipment is still largely designed empirically with little help from computer simulation Plasma process control is rudimentary Optimization of plasma reactor operation including adjustments to deal with increasingly stringent controls on plant emissions is performed predominantly by trial and error There is now a strong and growing economic incentive to improve on the traditional methods of plasma reactor and process design optimization and control An obvious strategy for both chip manufacturers and plasma equipment suppliers is to employ large scale modeling and simulation The major roadblock to further development of this promising strategy is the lack of a database for the many physical and chemical processes that occur in the plasma The data that are currently available are often scattered throughout the scientific literature and assessments of their reliability are usually unavailable Database Needs for Modeling and Simulation of Plasma Processing identifies strategies to add data to the existing database to improve access to the database and to assess the reliability of the available data In addition to identifying the most important needs this report assesses the experimental and theoretical computational techniques that can be used or must be developed in order to begin to satisfy these needs Fundamentals of Nanotechnology Gabor L.

Introduction to Nanoscience and Nanotechnology Gabor L. Hornyak, H.F. Tibbals, Joydeep Dutta, John J.

Moore, 2008-12-22 The maturation of nanotechnology has revealed it to be a unique and distinct discipline rather than a specialization within a larger field. Its textbook cannot afford to be a chemistry, physics, or engineering text focused on nano. It must be an integrated multidisciplinary and specifically nano textbook. The archetype of the modern nano textbook.

Plasma Science and Technology Tetsu Mieno, 2016-04-20 In the early twentieth century Dr Irving Langmuir actively studied plasma discharge and surface science. Since then great progress has been made in the development of applications of discharges and plasmas such as discharge lamps, electric tubes, and arc welding. In relation to studies on space physics and controlled nuclear fusion, plasma physics has greatly advanced. Plasma chemistry has also progressed along with its applications in LSI fabrication technology, the chemical vapor deposition of functional films, and the production of nanomaterials. In the twenty-first century, the further development of applications of plasma physics and plasma chemistry is certainly expected. In this book, 18 chapters on the recent progress in plasma science and technology have been written by active specialists worldwide.
