Pushing Our Limits Mark Nelson, 2018-02-27 Pushing Our Limits is a fresh examination of Biosphere 2 the world's first man made mini world twenty five years after its first closure experiment Author Mark Nelson one of the eight crew members locked in the enclosure during the 1991-1993 experiment offers a compelling insider's view of the dramatic story behind Biosphere 2 Biosphere 2 helped change public understanding of what our global biosphere is and how it provides for our health and well being However the experiment is often dismissed as a failure and news outlets at the time focused on interpersonal conflicts and unexpected problems that arose Delving past the sensationalism Nelson presents the goals and results of the experiment

addresses the implications of the project for our global situation and discusses how the project's challenges and successes can change our thinking about Biosphere 1 the Earth Pushing Our Limits offers insights from the project that can help us deal with our global ecological challenges It also shows the intense and fulfilling connection the biospherians felt with their life support system and how this led to their vigilant attention to its needs With current concerns of sustainability and protection of our global biosphere as well as the challenge of learning how to support life in space and on Mars the largest longest and most important experiment in closed ecosystems is more relevant than ever The book explores Biosphere 2's lessons for changing technology to support and not destroy nature and for reconnecting people to a healthy relationship with nature

Environmental Biotechnology Lawrence K. Wang, Volodymyr Ivanov, Joo-Hwa Tay, Yung-Tse Hung, 2010-04-05 The past 30 years have seen the emergence of a growing desire worldwide that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise Since pollution is a direct or indirect consequence of waste production the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste continues to exist we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved This book is one of the volumes of the Handbook of Environmental Engineering series The principal intention of this series is to help readers formulate answers to the last two questions above The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However the realization of the ever increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken
