

A photograph of a dirt road winding through a forest. The trees on either side have autumn foliage in shades of yellow, orange, and brown. The road leads towards a bright light at the end of the path, creating a strong perspective. The overall tone is warm and slightly hazy.

Catalog of Copyright Entries. Third Series Library of Congress. Copyright Office, 1952 Includes Part 1A Books and Part 1B Pamphlets Serials and Contributions to Periodicals **Unbelievable** Michael Newton Keas, 2019-01-08 Unbelievable explodes seven of the most popular and pernicious myths about science and religion Michael Newton Keas a historian of science lays out the facts to show how far the conventional wisdom departs from reality He also shows how these myths have proliferated over the past four centuries and exert so much influence today infiltrating science textbooks and popular culture The seven myths Keas shows amount to little more than religion bashing especially Christianity bashing Unbelievable reveals Why the Dark Ages never happened Why we didn't need Christopher Columbus to prove the earth was round Why Copernicus would be shocked to learn that he supposedly demoted humans from the center of the universe What everyone gets wrong about Galileo's clash with the Church and why it matters today Why the vastness of the universe does not deal a blow to religious belief in human significance How the popular account of Giordano Bruno as a martyr for science ignores the fact that he was executed for theological reasons not scientific ones How a new myth is being positioned to replace religion a futuristic myth that sounds scientific but isn't In debunking these myths Keas shows that the real history is much more interesting than the common narrative of religion at war with science This accessible and entertaining book offers an invaluable resource to students scholars teachers homeschoolers and religious believers tired of being portrayed as anti intellectual and anti science Antiquarian Bookman , 1962 **New Perspectives on Neo-Kantianism and the Sciences** Helmut Pulte, Jan Baedke, Daniel Koenig, Gregor Nickel, 2024-07-05 This volume considers the exchange between the Neo Kantian tradition in German philosophy and the sciences from the last third of the nineteenth century to the Great war and partly beyond During this period various scientific disciplines underwent modernisation processes characterised by an increasing empirical inclination and a decline in the influence of metaphysics the pluralisation of theories and the historical and pragmatic revitalisation of scientific claims against philosophy The various contributions look at the ways in which a certain Kantian orthodoxy was influenced by these new developments and whether and how itself had some impact on the development of the sciences The volume is not limited to the exact sciences of mathematics and physics which are particularly important for the Kantian tradition but also takes into account less recognised disciplines such as biology chemistry technology and psychology It is complemented by contributions that contrast Neo Kantianism with other scientific philosophies of the period in question **Flattening the Medieval Earth** Pablo de Felipe, 2025-08-08 Flattening the Medieval Earth explores the origin of the flat error i.e. the false accusation that ancient and medieval Christians believed in a flat Earth and what this implies in terms of a conflict between science and Christianity Engaging with scientific and religious debates this book includes a reception study of two key figures of the 4th century AD Lactantius and Augustine This study demonstrates that the mistaken dark image of medieval scholars as flat earthers started very early c 1600 as an internal

Christian debate in the context of new geographical and astronomical views The author draws on extensive research including many primary and secondary sources from different countries and languages not previously put into conversation Combining history of science church history science and religion history of navigation and historiography this book gives the most updated explanation of the origin of the flat earth finding paradoxes and unexpected answers along the way to understand the past and to reflect on some current approaches in science and religion Natural Philosophy Epitomised Gregor Reisch, 2010 Gregor Reisch's *The Philosophic pearl Margarita Philosophica* first published in 1503 was the first extensive printed text discussing the disciplines taught at university to achieve widespread dissemination It is presented as a dialogue between master and pupil covering the seven liberal arts natural philosophy and moral philosophy and with illustrations throughout It has received remarkably little attention in its own right as a work of education which helped shape the world view of sixteenth century educated men Its author was a Carthusian monk Offered here is a translation with annotation and an extensive introduction of the four books on natural philosophy the predecessor of modern science Natural philosophy for Reisch was a discipline which was as concerned with God and the Bible as it was with Nature and Aristotle

The Sciences in Enlightened Europe William Clark, Jan Golinski, Simon Schaffer, 1999-07 Radically reorienting our understanding of the Enlightenment this book explores the complex relations between enlightened values and the making of scientific knowledge Here monsters and automata barometers and botanical gardens polite academics and boisterous clubs plans for violent wars and for universal peace are all relocated in the landscape of enlightened Europe The contributors show how changing forms of discipline machinery and instrumentation affected the emergence of new kinds of knowledge consider how institutions of public taste and conversation helped provide a common frame for the study of human and nonhuman natures and explore the regional operations of scientific culture at the geographical fringes of Europe Covering a wide range of scientific disciplines both in the principal European countries and in areas peripheral to Europe the book also includes ample illustrations and an extensive bibliography Implicated in the rise of both fascism and liberal secularism the moral and political values that shaped the Enlightenment remain controversial today Through careful scrutiny of how these values influenced and were influenced by the concrete practices of its sciences this book gives us an entirely new sense of the Enlightenment from back cover **University of California Union Catalog of Monographs Cataloged by the Nine**

Zweifach, Lester Grant, Robert T. McCluskey, 2014-05-12 The Inflammatory Process Second Edition is an account of the inflammatory process and covers topics ranging from cell surface phenomena and connective tissue to the role of the formed elements of the blood in inflammatory states particularly in the light of the rapidly burgeoning literature on platelet physiology The life history and functional capacities of leukocytes are also examined along with chemotaxis phagocytosis and the mechanisms responsible for tissue damage in inflammation Comprised of 10 chapters this volume begins with an overview of the experimental approach to the study of inflammation

followed by a discussion on the biochemistry of the mammalian plasma membrane The reader is then introduced to cell injury chemotaxis phagocytosis and lysosomal mechanisms in the inflammatory process Subsequent chapters deal with the inflammatory process at the cellular level paying particular attention to neutrophil leukocytes the metabolism and physiology of mononuclear phagocytes the role of platelets in inflammatory reactions and structural and biochemical characteristics of mast cells This book will be of interest to practitioners in fields ranging from biochemistry to pathology bacteriology physiology and immunology

A Bridge to the Sky Glaire D. Anderson, 2024 A Caliphal Daedalus examines connections between science and visual culture during the early Islamic scientific revolution of the caliphal age 650 1250 CE It takes as its point of departure the figure of Abbas Ibn Firnas d 887 the most famous scientist and polymath of early Islamic Spain The book considers his scientific activities as these intersected with design and craft culminating in the aeronautics experiment for which he is best known today as these are recounted in the Muqtabis the chronicle compiled by the Cordoban court historian Ibn Hayyan d 1076 It calls into question notions that medieval Islamic artisans and designers were anonymous individuals working outside elite social and intellectual circles The key passages from the chronicle are presented in English translation including the oldest and most authoritative source for the aeronautics experiment The Arabic texts are examined in tandem with the earliest Islamic scientific instruments especially astrolabes and illustrated Arabic treatises of astronomy and engineering preserved in museums and libraries around the globe The book argues for a medieval Islamic court culture in which design and making were central to scientific intellectual pursuits and which may have shaped the culture of the Italian Renaissance

The Secular Chronicle ,1877 Drawing from Life Patricia Jonas, 2007 A century ago it was fashionable for young women to collect and paint plants as a sort of genteel parlor skill Some singularly talented women became professionals but their contributions to both art and botany have remained nearly invisible The exhibition Drawing from life features the work of 14 women botanical artists from the first decades of the 20th century to the present focusing on the forgotten art of Brooklyn Botanic Garden s staff artist for 32 years Maud H Purdy Side by side these works reveal how established conventions of botanical art are shaped both by fashions of the times and individual artistic visions Paintings scientific illustrations herbarium specimens preparatory sketches and objects of material culture explore the boundaries between art science and craft and invite us to see plants with fresh eyes Back cover
