Ayyub, 2001-06-27 Experts despite their importance and value can be double edged swords They can make valuable contributions from their deep base of knowledge but those contributions may also contain their own biases and pet theories Therefore selecting experts eliciting their opinions and aggregating their opinions must be performed and handled carefully w

Elicitation Luis C. Dias, Alec Morton, John Quigley, 2017-11-16 This book is about elicitation the facilitation of the quantitative expression of subjective judgement about matters of fact interacting with subject experts or about matters of value interacting with decision makers or stakeholders It offers an integrated presentation of procedures and processes that allow analysts and experts to think clearly about numbers particularly the inputs for decision support systems and models This presentation encompasses research originating in the communities of structured probability elicitation calibration and multi criteria decision analysis often unaware of each other s developments Chapters 2 through 9 focus on processes to elicit uncertainty from experts including the Classical Method for aggregating judgements from multiple experts concerning probability distributions the issue of validation in the Classical Method the Sheffield elicitation framework the IDEA protocol approaches following the Bayesian perspective the main elements of structured expert processes for dependence elicitation and how mathematical methods can incorporate correlations between experts Chapters 10 through 14 focus on processes to elicit preferences from stakeholders or decision makers including two chapters on problems under uncertainty utility functions and three chapters that address elicitation of preferences independently of or in absence of any uncertainty elicitation value functions and ELECTRE Two chapters then focus on cross cutting issues for elicitation of uncertainties and elicitation of preferences biases and selection of experts Finally the last group of chapters illustrates how some of the presented approaches are applied in practice including a food security case in the UK expert elicitation in health care decision making an expert judgement based method to elicit nuclear threat risks in US ports risk assessment in a pulp and paper manufacturer in the Nordic countries and elicitation of preferences for crop planning in a Greek region

Hora,2006 **Expert Knowledge and Its Application in Landscape Ecology** Ajith H. Perera,C. Ashton Drew,Chris J. Johnson,2011-10-21 Typically landscape ecologists use empirical observations to conduct research and devise solutions for applied problems in conservation and management In some instances they rely on advice and input of experienced professionals in both developing and applying knowledge Given the wealth of expert knowledge and the risks of its informal and implicit applications in landscape ecology it is necessary to formally recognize and characterize expert knowledge and bring rigor to methods for its applications In this context the broad goal of this book is to introduce the concept of expert knowledge and examine its role in landscape ecological applications We plan to do so in three steps First we introduce the topic to landscape ecologists explore salient characteristics of experts and expert knowledge and describe methods used in capturing and formalizing that knowledge Second we present examples of research in landscape ecology from a variety of ecosystems and geographic locations that formally incorporate expert knowledge These case studies address a range of topics that will interest landscape ecologists and other resource management and conservation professionals including the specific roles of expert knowledge in developing testing parameterizing and applying models estimating the uncertainty in expert knowledge developing methods of formalizing and incorporating expert knowledge and using expert knowledge as competing models and a source of alternate hypotheses Third we synthesize the state of knowledge on this topic and critically examine the advantages and disadvantages of incorporating expert knowledge in landscape ecological applications The disciplinary subject areas we address are broad and cover much of the scope of contemporary landscape ecology including broad scale forest management and conservation quantifying forest disturbances and succession conservation of habitats for a range of avian and mammal species vulnerability and conservation of marine ecosystems and the spread and impacts of invasive plants This text incorporates the collective experience and knowledge of over 35 researchers in landscape ecology representing a diverse range of disciplinary subject areas and geographic locations Through this text we will catalyze further thought and investigations on expert knowledge among the target readership of researchers practitioners and graduate students in landscape ecology Geological Repository Systems for Safe Disposal of Spent Nuclear Fuels and Radioactive Waste Michael J Apted,Joonhong Ahn,2010-07-27 Geological disposal has been internationally adopted as the most effective approach to assure the long term safe disposition of the used nuclear fuels and radioactive waste materials produced from nuclear power generation nuclear weapons programs medical treatments and industrial applications Geological repository systems take advantage of natural geological barriers augmented with engineered barrier systems to isolate these radioactive materials from the environment and from future populations Geological repository systems for safe disposal of spent nuclear fuels and radioactive waste critically reviews the state of the art technologies scientific methods regulatory developments and social engagement approaches directly related to the implementation of geological repository systems Part one introduces geological disposal including multiple barrier geological repositories as well as reviewing the
