Virtual Instruments

FOR LABORATORY AND FIELD USE

GEORGE W. H. HARRISON

Virtual Instruments (VIs) are software-based instruments that can be used to measure and control physical systems. They are typically used in laboratory and field environments where traditional hardware instruments are not available or are too expensive. VIs can be used to measure a wide range of physical quantities, including voltage, current, temperature, pressure, and force. They can also be used to control physical systems, such as motors, valves, and actuators. VIs are typically used in conjunction with a computer and a data acquisition system.
