current management strategies assesses the biological and physical effects of climate change on natural systems in Cameroon and designs a planning and management framework for each natural system within the context of global warming. Climate change poses a complex bewildering array of problems for ecosystems. The key question is what can be done in addition to efforts to reduce CO<sub>2</sub> emissions to increase the resistance and resilience of these natural systems to climate change. This book seeks to answer the above question by drawing from the vast array of scientific data available on the subject and which may not be readily available to policy makers, resource planners, resource managers, environmentalists, students of geography, conservation biology and agronomy. It constitutes an important manual for those ready to confront the impacts of climate change. It is also a valuable document for teachers of the functioning and management of natural systems globally.

The Amazon Roger Harris, Peter Hutchison, 2007. This new edition has been completely revised with updated information on hotels, lodges and tour operators. It contains a detailed and illustrated natural history section on native species and habitats. The Amazon is an ideal location for eco travellers, naturalists, sports enthusiasts and explorers. Travellers are given sound advice on responsible travel and planning their own expedition.

**Local Livelihoods and Protected Area Management** Emmanuel Neba Ndenecho, 2011. Cameroon's tropical forest is home to numerous plants and animals. It is also inhabited by Baka pygmies who are foragers and Bantu farmers. These communities have developed forest dependent livelihoods, cultures and religions. Destruction of the forest by commercial and state interests, subsistence agriculture and the harvesting of products has necessitated a considerable upsurge in environmental protection projects to conserve and rehabilitate ecosystems, forests, soils and water resources. Ultimately, the approach to conservation that is applied is the responsibility of the government and international development agencies. The case studies documented seek to demonstrate that a broader perspective linking environmental protection and human welfare is important for two reasons. First, it addresses the rights and needs of local people and more marginal groups in society. Second, it also ensures that fundamental conservation objectives are achieved in practice with the participation of local people. The book develops guidelines for a more integrative and socially aware approach to environmental planning and project design and implementation. It outlines a participatory mapping procedure for the design and implementation of community forest programmes. This is a valuable book for land resource managers, environmentalists, environmental biologists, conservators, field workers and technicians involved with environmental conservation. With the professionalisation of courses in most universities, the book will constitute good reading for students of geography, biology, agriculture, forestry, botany and natural resource management.

**Principles of Environmental Management** Rogene A. Buchholz, 1993. A comprehensive examination of environmental concerns important to business and management. This volume provides a theoretical framework for analyzing environmental issues, a discussion of specific environmental issues and strategic approaches to these problems from the standpoint of business and society.
