

# Cardiac Emergency

## Check patient

### Signs of SCA

- ▶ Unconscious
- ▶ Not breathing
- ▶ No circulation (no pulse)

If victim is unresponsive, activate the chain of survival; a series of steps and procedures, which together could save the life of a sudden cardiac arrest (SCA) victim.

**1**

### Call for help

Stay with the victim; send someone to CALL 911 and return with the AED.

**2**

### Start CPR

Begin CPR immediately to circulate oxygenated blood to the brain and body. As soon as the AED arrives, use it.

**3**

### Early Defibrillation

1. Turn on AED
2. Follow audible instructions
3. Press the shock button, if advised.

**4**

### Advanced Care

Have someone direct the paramedics to the scene and update them on the status of the victim.

### Act Fast!

Acting fast is critical to increasing the likelihood of survival in SCA. In fact, when defibrillation occurs within the first few minutes after the victim has collapsed, the odds of survival are significantly increased. In fact, the survival rate drops by about 1% for every minute that passes.

### Importance of CPR

Performing CPR, which is an essential part of the chain of survival, can double the victim's chance of survival. CPR, CPR will circulate blood and oxygen to the brain and heart, giving the body a better chance to respond to defibrillation therapy.

### AEDs Are Safe

AEDs are safe to use on anyone who appears to be unresponsive. They are simple to operate, and should be used with the lowest AED/ECG device. Standard AED/ECG training can be obtained through nationally certified training centers. These centers will give a person the skills needed to perform CPR and use an AED device safely.

Notice where AEDs are located.

A sudden cardiac arrest (SCA) is a life-threatening condition that can occur without warning. Knowing how to respond quickly can increase the victim's chance of survival.
