Safar,2012-12-06 F A Bauhofer Geneva In disaster situations the particular concern of WHO is not so much to offer immediate relief and assistance for affected communities but to have ready prepared plans for the provision of primary medical care as well as for resuscitation and casualty services Disasters are characterized by a need for rapid assistance and by the inability of affected communities to cope with the large scale mortality morbidity and damage to essential installations and homes In some highly elaborate and centralized societies even small scale events may assume the proportion of a disaster if they result in the serious break down of vital services The Executive Board of the World Health Organization has defined disasters or emergencies as situations where there are unforeseen serious and immediate threats to public health Particularly severe disasters may be classified as catastrophes such occurrences whether natural or man made disturb or overthrow the existing order For planning purposes it is important to distinguish between different types of catastrophes since they require special relief measures In the past medical assistance was primarily needed in epidemics of for example plague cholera and smallpox Today health authorities face emergency problems brought about by major accidents and outbreaks of chemical pollution and poisoning which may have long term effects The role of health services may differ quite extensively in different types of catastrophes and an attempt must be made to draw up specific plans to deal with them **Brushy Creek State Recreation Area, Proposed Dam and Lake, Webster County** ,1992 *The Proceedings of the 2023 Conference on Systems Engineering Research* Dinesh Verma,Azad M.
