An injury with a bow tie sign is not always a unilateral facet dislocation. Patient 5B—Lateral mass fracture.

The lateral cervical spine radiograph shows double-diamonds (bow ties) at C3 and C4 (A and B, asterisks). There is also slight anterior slippage (anterolisthesis) of C4 on C5.

These findings are due to a fracture and rotational deformity of the right C4 lateral mass. C3 was rotated due to the injury at C4.

On the AP view, there is discontinuity of the right lateral mass column – the C4-C5 facet joint surface is visible (C, arrow). The C4 lateral mass is fractured and rotated. Source: Chapter V-5. Unilateral Facet Dislocation, *Emergency Radiology: Case Studies*

and rotated. Source: Chapter V-5. Unilateral Facet Dislocation, *Emergency Radiology: Case Studies*

The fracture was clinically insignificant and the patient was discharged home. The patient was followed up with a CT scan of the cervical spine, which showed a fracture of the right lateral mass of the C4 vertebra. A neurosurgery consultation for further surgery was indicated due to the long time that elapsed since her injury. She was referred to physical therapy for her C4 and C5 radiculopathies.
