**Handbook of Philosophical Logic** D.M. Gabbay, Franz Guenther, 2005-12-15 Intended to comprise some 18 volumes and provides an in depth coverage of major topics in philosophical logic and its applications in many fields relating to computer science language argumentation and more This work is aimed at students and researchers whose work or interests involve philosophical logic and its applications *Handbook of Philosophical Logic* Dov M. Gabbay, Franz

Guenther, 2013-04-17 It is with great pleasure that we are presenting to the community the second edition of this extraordinary handbook It has been over 15 years since the publication of the first edition and there have been great changes in the landscape of philosophical logic since then The first edition has proved invaluable to generations of students and researchers in formal philosophy and language as well as to consumers of logic in many applied areas The main logic article in the Encyclopaedia Britannica 1999 has described the first edition as the best starting point for exploring any of the topics in logic We are confident that the second edition will prove to be just as good The first edition was the second handbook published for the logic community It followed the North Holland one volume Handbook of Mathematical Logic published in 1977 edited by the late Jon Barwise The four volume Handbook of Philosophical Logic published 1983 1989 came at a fortunate temporal junction at the evolution of logic This was the time when logic was gaining ground in computer science and artificial intelligence circles These areas were under increasing commercial pressure to provide devices which help and or replace the human in his daily activity This pressure required the use of logic in the modelling of human activity and organisation on the one hand and to provide the theoretical basis for the computer program constructs on the other

**Handbook of Philosophical Logic** Dov M. Gabbay, Franz Guenther, 2013-06-29 This volume presents a number of systems of logic which can be considered as alternatives to classical logic The notion of what counts as an alternative is a somewhat problematic one There are extreme views on the matter of what is the correct logical system and whether one logical system e g classical logic can represent or contain all the others The choice of the systems presented in this volume was guided by the following criteria for including a logic as an alternative i the departure from classical logic in accepting or rejecting certain theorems of classical logic following intuitions arising from significant application areas and or from human reasoning ii the alternative logic is well established and well understood mathematically and is widely applied in other disciplines such as mathematics physics computer science philosophy psychology or linguistics A number of other alternatives had to be omitted for the present volume e g recent attempts to formulate so called non monotonic reasoning systems Perhaps these can be included in future extensions of the Handbook of Philosophical Logic Chapter 1 deals with partial logics that is systems where sentences do not always have to be either true or false and where terms do not always have to denote These systems are thus in general geared towards reasoning in partially specified models Logics of this type have arisen mainly from philosophical and linguistic considerations various applications in theoretical computer science

Gabbay, Franz Guentthner, 2012-12-06 conceptual realist theories of predication Chapter IV 4 centers on an important class of expressions used for predication in connection with quantities mass expressions This chapter reviews the most well known approaches to mass terms and the ontological proposals related to them In addition to quantification and predication matters of reference have constituted the other overriding theme for semantic theories in both philosophical logic and the semantics of natural languages Chapter IV 5 of how the semantics of proper names and descriptions presents an overview of how they have been dealt with in recent theories of reference Chapter IV 6 is concerned with the context dependence of reference in particular with the semantics of indexical expressions The topic of Chapter IV 7 is related to predication as it surveys some of the central problems of ascribing propositional attitudes to agents Chapter IV 8 deals with the analysis of the main temporal aspects of natural language utterances Together these two chapters give a good indication of the intricate complexities that arise once modalities of one or the other sort enter on the semantic stage in philosophical Chapter IV 9 deals with another well known topic logic presupposition an issue on the borderline of semantics and pragmatics The volume closes with an extensive study of the Liar paradox and its many implications for the study of language as for example self reference truth concepts and truth definitions

Propositional Logic A Quantifier Scope in Formal Linguistics and Non deterministic Semantics for Logical Systems

**Handbook of Philosophical Logic** Dov M. Gabbay, Franz Guenther, 2013-08-04 This second edition of the Handbook of Philosophical Logic reflects great changes in the landscape of philosophical logic since the first edition It gives readers an idea of that landscape and its relation to computer science and formal language and artificial intelligence It shows how the increased demand for philosophical logic from computer science and artificial intelligence and computational linguistics accelerated the development of the subject directly and indirectly This development in turn directly pushed research forward stimulated by the needs of applications New logic areas became established and old areas were enriched and expanded At the same time it socially provided employment for generations of logicians residing in computer science linguistics and electrical engineering departments which of course helped keep the logic community to thrive The many contributors to this Handbook are active in these application areas and are among the most famous leading figures of applied philosophical logic of our times

**Handbook of Philosophical Logic** Dov M. Gabbay, Franz Guenther, 2007-09-14 The fourteenth volume of the Second Edition covers central topics in philosophical logic that have been studied for thousands of years since Aristotle Inconsistency Causality Conditionals and Quantifiers These topics are central in many applications of logic in central disciplines and this book is indispensable to any advanced student or researcher using logic in these areas The chapters are comprehensive and written by major figures in the field

**Handbook of Philosophical Logic** Dov M. Gabbay, Franz Guenther, 2018-11-22 This eighteenth volume of the acclaimed Handbook of Philosophical Logic includes many contributors who are among the most famous leading figures of applied philosophical logic of our time Coverage includes deontic logic practical reasoning homogeneous and heterogeneous logical proportion and talmudic logic Overall it will appeal to students practitioners and researchers looking for an authoritative resource in these areas The contributors first explore models in terms of dynamic logics for information driven agency The paradigm they use is dynamic epistemic logics for knowledge and belief and their current extensions to the statics and dynamics of agents preferences Next in the presentation of preference based agency coverage examines a large number of themes including interactive social agents and scenarios with long term patterns emerging over time From here the book moves on to offer an introduction to homogeneous and heterogeneous logical proportions Readers will also learn more about the general challenge that the problem of formalizing practical reasoning presents to logical theory The contributors survey the existing resources that might contribute to the development of such a formalization They conclude that while a robust adequate logic of practical reasoning is not yet in place the materials for developing such a logic are now available The last chapter explores topics that deal with the logic of Jewish law and the logic of the Talmud This includes obligations and prohibitions in Talmudic deontic logic the handling of loops in Talmudic logic Temporal Talmudic logic and quantum states and disjunctive attacks in Talmudic logic The Talmudic logic system presented are also exported to general logic and to Artificial Intelligence

**Handbook of Philosophical Logic** Dov M.

Gabbay, Franz Guenther, 2011-12-14 The chapters in the present volume go beyond classical extensional logic with respect to one important factor they all include among the semantic constituents representations of so called possible worlds The inclusion of such indices has turned out to be the semantic mainstay in dealing with a number of issues having to do with intensional features of natural and artificial languages It is of course an open question whether possible world semantics is in the final analysis the proper solution to the many problems and puzzles intensional constructions raise for the logical analysis of the many varieties of discourse At present there seem to be about as many opponents as proponents with regard to the usefulness of having the semantics of intensional languages based on possible world constructs Some attempts to come to grips with intensional phenomena which are not couched in the possible world framework are discussed in Volume IV of the Handbook Chapter 1 is an extensive survey of the main systems of propositional modal logic including the most important meta mathematical results and the techniques used in establishing these It introduces the basic terminology and semantic machinery applied in one way or another in many of the subsequent chapters Chapter 2 discusses the most significant developments in propositional tense logic which can of course be regarded as a special kind of modal logic where the possible world indices are simply ordered moments of time

Handbook of Philosophical Logic Dov M. Gabbay, Franz Guenther, 2012-12-06 The aim of the first volume of the present Handbook of Philosophical Logic is essentially two fold First of all the chapters in this volume should provide a concise overview of the main parts of classical logic Second these chapters are intended to present all the relevant background material necessary for the understanding of the contributions which are to follow in the next three volumes We have thought it to be of importance that the connections between classical logic and its extensions covered in Volume 11 as well as its most important alternatives covered in Volume III be brought out clearly from the start The first chapter presents a clear and detailed picture of the range of what is generally taken to be the standard logical framework namely predicate or first order quantificational logic On the one hand this chapter surveys both propositional logic and first order predicate logic and on the other hand presents the main metalogical results obtained for them Chapter 1 also contains a discussion of the limits of first order logic i e it presents an answer to the question Why has predicate logic played such a formidable role in the formalization of mathematics and in the many areas of philosophical and linguistic applications Chapter 1 is prerequisite for just about all the other chapters in the entire Handbook while the other chapters in Volume I provide more detailed discussions of material developed or hinted at in the first chapter

**Handbook of Philosophical Logic** Dov M. Gabbay, Franz Guenther, 1994-09-30 The Handbook of Philosophical Logic is a unique systematic survey of the central areas of philosophical logic Divided into four volumes each devoted to a major sub field within the disciplines it is expected that the Handbook will have considerable influence in the field for many years to come Written by world authorities in philosophical logic the work reflects careful and fruitful collaboration by the authors at every

stage of the project This has ensured a comprehensive and definitive set of articles which will be of inestimable value to general philosophers linguists logicians mathematicians and computer scientists Volume I Elements of Classical Logic deals with the background to what has come to be considered the standard formulation of predicate logic both as far as its semantics and proof theory are concerned The central chapter on predicate logic is followed by chapters outlining various alternative but essentially equivalent ways of constructing the semantics for first order logic as well as its proof theory In addition this volume contains a discussion of higher order extensions of first order logic and a compendium of the algorithmic and decision theoretic prerequisites in the study of logical systems Volume II Extensions of Classical Logic surveys the most significant intensional extensions of predicate logic and their applications to various philosophical fields of inquiry The twelve chapters in this volume together provide a succinct introduction to a variety of intensional frameworks a discussion of the most well known logical systems as well as an overview of major applications and of the open problems in the respective fields Volume III Alternatives to Classical Logic consists of a series of surveys of some of the alternatives to the basic assumptions of classical logic These include many valued logic partial logic free logic relevance and entailment logics dialogue logic quantum logic and intuitionism Volume IV Topics in the Philosophy of Language presents a panorama of the applications of logical tools and methods in the formal analysis of natural language Since a number of developments in philosophical logic were originally stimulated by concern arising in the semantic analysis of natural language discourse the chapters in this volume provide some criteria of evaluation of the applications of work in philosophical logic In revealing both the adequacies and inadequacies of logical investigations in the semantic structures of natural discourse these chapters also point the way to future developments in philosophical logic in general and thus close again the circle of inquiry relating logic and language
