Handbook Of Simulator Based Training:

Handbook of Simulator-Based Training Eric Farmer, John van Rooij, Johan Riemersma, Peter Jorna, 2017-03-02
Advances in simulation technology have enabled an interesting amount of training and instruction to be conducted on training simulators instead of on real systems. However, experiences with the procurement and use of training simulators has not always been as successful, often owing to a lack of knowledge of didactics and of training programme development and also to inadequate simulator specifications. The Handbook of Simulator based Training represents the first comprehensive overview of the European state of the art in simulator based training. It also comprises a well founded and systematic approach to simulator based training and the specification of simulator requirements. The multi disciplinary research project described in this book combines the expertise of specialists in human factors, information systems, system design and engineering from 23 research and industrial organizations from five countries: France, Germany, the Netherlands, Spain, the UK. The authors have synthesized and documented the project results to ensure that this handbook provides not only many valuable guidelines but more importantly a common frame of reference. It will be a key resource for the many specialists who are concerned with simulator based training: researchers, engineers and users, military training institutes and training system development departments, military staff responsible for the procurement of training devices and simulators, the simulator industry, the training research community and the human factors and ergonomics community.

Manual of Simulation in Healthcare Richard H. Riley, 2008
Medical simulation is a relatively new science that is achieving respectability among healthcare educators worldwide.

Simulation and skills centres have become established to integrate simulation into mainstream education in all medical nursing and paramedical fields Borrowing from the experience and methodologies of industries that are using simulation medical educators are grappling with the problem of rapidly acquiring the skills and techniques required to implement simulation programmes into established curricula This book assists both novice and experienced workers in the field to learn from established practitioners in medical simulation Simulation has been used to enhance the educational experience in a diverse range of fields therefore a wide variety of disciplines are represented The book begins with a section on the logistics of establishing a simulation and skills centre and the inherent problems with funding equipment staffing and course development and promotion Section two deals with simulators and related training devices that are required to equip a stand alone or institution based centre The features strengths and weaknesses of training devices are presented to help the reader find the appropriate simulator to fulfil their training requirements There is a guide to producing scenarios and medical props that can enhance the training experience The third section covers adult education and it reviews the steps required to develop courses that comply with best practice in medical education Teaching skills facilitating problem based learning groups and debriefing techniques are especially important to multidisciplinary skills centres that find themselves becoming a centre for medical education The manual concludes with guides for the major specialties that use simulation including military paediatrics CPR and medical response teams obstetrics and anaesthesia

Mixed Methodology in Psychological Research, 2007-01-01 Mixed Methodology is a new star in the social science sky More and more researchers are discontent with mono method concepts for their research projects They are trying new ways in combining or integrating different methods and methodological approaches There are two debates in this field the qualitative quantitative controversy and the one method multi method discourse This book discusses those controversies and tries to give some reasons and examples for overcoming mono method research in psychology We think the discussion of methodological topics should not be divided from specific research projects Only in the context of a concrete research question it makes sense to consider adequate research methods So the volume presents examples of mixed methodologies from different fields in psychology and education from psychiatry to organisational psychology from learning studies to media analysis The studies are grouped into four sections combining qualitative methods combining qualitative and quantitative methods access to individual experience by mixed methods and deeper understanding of findings by mixing methods The book is addressed to all students researchers and methodological interested people in social sciences and especially in psychology

Handbook of Cardiac Anatomy, Physiology, and Devices Paul A. Iaizzo, 2009-07-01 A revolution began in my professional career and education in 1997 In that year I visited the University of Minnesota to discuss collaborative opportunities in cardiac anatomy physiology and medical device testing The meeting was with a faculty member of the Department of Anesthesiology Professor Paul Iaizzo I didn't know what to expect but as always I remained open minded and optimistic Little did I know that my life would never be the same During the mid to late 1990s Paul Iaizzo and his team were performing anesthesia research on isolated guinea pig hearts We found the work appealing but it was unclear how this research might apply to our interest in tools to aid in the design of implantable devices for the cardiovascular system As discussions progressed we noted that we would be far more interested in reanimation of large mammalian hearts in particular human hearts Paul was confident this could be accomplished on large hearts but thought that it would be unlikely that we would ever have access to human hearts for this application We shook hands and the collaboration was born in 1997 In the same year Paul and the research team at the University of Minnesota including Bill Gallagher and Charles Soule reanimated several swine hearts Unlike the previous work on guinea pig hearts which were reanimated in Langendorff mode the intention of this research was to produce a fully functional working heart model for device testing and cardiac research
