Sociology for Health Professionals in Ireland Abbey Hyde,2004 Oxford Textbook of Primary Medical Care Roger Jones (Prof.),2005 **Resilient Health Care, Volume 2** Robert L. Wears,Erik Hollnagel,2017-03-02 Health systems everywhere are expected to meet increasing public and political demands for accessible high quality care Policy makers managers and clinicians use their best efforts to improve efficiency safety quality and economic viability One solution has been to mimic approaches that have been shown to work in other domains such as quality management lean production and high reliability In the enthusiasm for such solutions scant attention has been paid to the fact that health care as a multifaceted system differs significantly from most traditional industries Solutions based on linear thinking in engineered systems do not work well in complicated multi stakeholder non engineered systems of which health care is a leading example A prerequisite for improving health care and making it more resilient is that the nature of everyday clinical work be well understood Yet the focus of the majority of policy or management solutions as well as that of accreditation and regulation is work as it ought to be also known as work as imagined The aim of policy makers and managers whether the priority is safety quality or efficiency is therefore to make everyday clinical work or work as done comply with work as imagined This fails to recognise that this normative conception of work is often oversimplified incomplete and outdated There is therefore an urgent need to better understand everyday clinical work as it is done Despite the common focus on deviations and failures it is undeniable that clinical work goes right far more often than it goes wrong and that we only can make it better if we understand how this happens This second volume of Resilient Health Care continues the line of thinking of the first book but takes it further through a range of chapters from leading international thinkers on resilience and health care Where the first book provided the rationale and basic concepts of RHC the Resilience of Everyday Clinical Work b Handbook of Disability Studies Gary L. Albrecht,Katherine D. Seelman,Michael Bury,2001 This path breaking international handbook of disability studies signals the emergence of a vital new area of scholarship social policy and activism Drawing on the insights of disability scholars around the world and the creative advice of an international editorial board the book engages the reader in the critical issues and debates framing disability studies and places them in an historical and cultural context Five years in the making this one volume summarizes the ongoing discourse ranging across continents and traditional academic disciplines To provide insight and perspective the volume is divided into three sections The shaping of disability studies as a field experiencing disability and disability in context Each section written by world class figures consists of original chapters designed to map the field and explore the key conceptual theoretical methodological practice and policy issues that

constitute the field Each chapter provides a critical review of an area positions and literature and an agenda for future research and practice The handbook answers the need expressed by the disability community for a thought provoking interdisciplinary international examination of the vibrant field of disability studies The book will be of interest to disabled people scholars policy makers and activists alike The book aims to define the existing field stimulate future debate encourage respectful discourse between different interest groups and move the field a step forward
