Abductive Cognition Lorenzo Magnani, 2009-10-13 This volume explores abductive cognition an important but at least until the third quarter of the last century neglected topic in cognition It aims at increasing knowledge about creative and expert inferences

Spatial Cognition Seán Ó Nualláin, 2000-01-01 Spatial Cognition brings together psychology computer science linguistics and geography discussing how people think about space our internal cognitive maps and spatial perception and how we communicate about space for instance giving route directions or using spatial metaphors The technological applications adding dynamism to the area include computer interfaces educational software multimedia and in car navigation systems On the experimental level themes as varied as gender differences in orientation and of course wholly unrelated the role of the hippocampus in rodent navigation are described Much detailed analysis and computational modeling of the structure of short term memory STM is discussed The papers were presented at the 1998 annual meeting of the Cognitive Science Society of Ireland Mind III Series B

Child Psychology in Retrospect and Prospect Willard W. Hartup, Richard A. Weinberg, 2014-02-25 This 32nd volume of the Minnesota Symposium on Child Psychology celebrates the 75th anniversary of the University of Minnesota's Institute of Child Development All eight essays are devoted to developmental science its history and current status Taken together the chapters in this book show how the history of science connects past and future how it gives the individual investigator an identity and sense of purpose how contemporary studies occur within larger traditions and how institutions like the Institute of Child Development constitute cultural traditions of their own Collectively these essays show that the past explains a great deal whether we want to know about the processes through which the child acquires symbolic thought or whether we want to know how and why during the last century a few enduring centers were established for the scientific study of children and adolescents Reading these essays one obtains a sense of how the past becomes evidence how it forms models for the way we think and how intellectual challenges arise

Development of Mental Representation Irving E. Sigel, 2013-06-17 There is a general and extensive literature in the development of representational thought and symbolic processes because of its centrality in human evolution However the umbrella of science and its method does not necessarily lead to a coherent conceptual model or agreements

among scholars These basic differences among various disciplines have led to the creation of new and exciting realms of research This book considers how representational or symbolic thought develops for children s use in a wide array of these circumstances

Provided by publisher Designing for Gesture and Tangible Interaction Mary Lou Maher,Lina Lee,2022-05-31 Interactive technology is increasingly integrated with physical objects that do not have a traditional keyboard and mouse style of interaction and many do not even have a display These objects require new approaches to interaction design referred to as post WIMP Windows Icons Menus and Pointer or as embodied interaction design This book provides an overview of the design opportunities and issues associated with two embodied interaction modalities that allow us to leave the traditional keyboard behind tangible and gesture interaction We explore the issues in designing for this new age of interaction by highlighting the significance and contexts for these modalities We explore the design of tangible interaction with a reconceptualization of the traditional keyboard as a Tangible Keyboard and the design of interactive three dimensional 3D models as Tangible Models We explore the design of gesture interaction through the design of gesture base commands for a walk up and use information display and through the design of a gesture based dialogue for the willful marionette We conclude with design principles for tangible and gesture interaction and a call for research on the cognitive effects of these modalities

Philosophy and Geometry L. Magnani,2012-12-06 Philosophers have studied geometry since ancient times Geometrical knowledge has often played the role of a laboratory for the philosopher s conceptual experiments dedicated to the ideation of powerful theories of knowledge Lorenzo Magnani s new book Philosophy and Geometry illustrates the rich intrigue of this fascinating story of human knowledge providing a new analysis of the ideas of many scholars including Plato Proclus Kant and Poincar and discussing conventionalist and neopositivist perspectives and the problem of the origins of geometry The book also ties together the concerns of philosophers of science and cognitive scientists showing for example the connections between geometrical reasoning and cognition as well as the results of recent logical and computational models of geometrical reasoning All the topics are dealt with using a novel combination of both historical and contemporary perspectives Philosophy and Geometry is a valuable contribution to the renaissance of research in the field

Abduction, Reason and Science L. Magnani,2011-06-27 This volume explores abduction inference to explanatory hypotheses an important but neglected topic in scientific reasoning My aim is to integrate philosophical cognitive and computational issues while also discussing some cases of reasoning in science and medicine The main thesis is that abduction is a significant kind of scientific reasoning helpful in delineating the first principles of a new theory of science The status of abduction is very

controversial When dealing with abductive reasoning misinterpretations and equivocations are common What are the differences between abduction and induction What are the differences between abduction and the well known hypothetico deductive method What did Peirce mean when he considered abduction a kind of inference Does abduction involve only the generation of hypotheses or their evaluation too Are the criteria for the best explanation in abductive reasoning epistemic or pragmatic or both How many kinds of abduction are there The book aims to increase knowledge about creative and expert inferences The study of these high level methods of abductive reasoning is situated at the crossroads of philosophy epistemology artificial intelligence cognitive psychology and logic that is at the heart of cognitive science Philosophers of science in the twentieth century have traditionally distinguished between the inferential processes active in the logic of discovery and the ones active in logic of justification
