*Food Composition and Analysis* Leonard W. Aurand, 2013-11-11 There is an increasing demand for food technologists who are not only familiar with the practical aspects of food processing and merchandising but who are also well grounded in chemistry as it relates to the food industry Thus in the training of food technologists there is a need for a textbook that combines both lecture material and laboratory experiments involving the major classes of foodstuffs and food additives To meet this need this book was written In addition the book is a reference text for those engaged in research and technical work in the various segments of the food industry The chemistry of representative classes of foodstuffs is considered with respect to food composition effects of processing on composition food deterioration food preservation and food additives Standards of identity for a number of the food products as prescribed by law are given The food products selected from each class of foodstuffs for laboratory experimentation are not necessarily the most important economically or the most widely used However the experimental methods and techniques utilized are applicable to the other products of that class of foodstuff Typical food adjuncts and additives are discussed in relation to their use in food products together with the

laws regulating their usage Laboratory experiments are given for the qualitative identification and quantitative estimation of many of these substances

**Physico-chemical Aspects of Textile Coloration** Stephen M. Burkinshaw, 2016-02-08 The production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products As the great majority of such products are coloured predominantly using aqueous dyeing processes the coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to the various types of textile material The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres Physico Chemical Aspects of Textile Coloration provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural man made and synthetic fibres with the principal types of dye The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing dyeing as an area of study as well as the terminology employed in dyeing technology and science contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres polyester polyamide wool polyacrylonitrile and silk fibres non aqueous dyeing as represented by the use of air organic solvents and supercritical CO<sub>2</sub> fluid as alternatives to water as application medium The up to date text is supported by a large number of tables figures and illustrations as well as footnotes and widespread use of references to published work The book is essential reading for students teachers researchers and professionals involved in textile coloration
