 6236 Eschborn 1 FRG This publication was geared to the needs of a project in Algeria More recently the editors were
 requested by the GTZ to produce on the basis of the previous collection of the water analysis methods which was published in
 French an updated and revised version to be used in different partner countries and for publication in 1985/86 This was not
 only to take account of advances in water analysis and instrumental techniques but also to include simple methods of analysis
 for use in the field and methods suitable for use in laboratories with relatively unsophisticated equipment The approach
 envisaged by the GTZ was to divide up information on water water supplies and water analysis into three broad groups
 namely 1 Simple modules on the physics and chemistry of water water hygiene and water analysis capable of being
 understood and applied in practice by the layman using suitable chemicals and equipment W Schneider 2 Information to
 supplement work by Rump Krist also commissioned by the GTZ on water analysis methods which could be used in
