Lindley-Cowen, 1897 species are included The West Australian Settler's Guide and Farmer's Handbook ,1897 Handbook of Western Australian Birds R. E. Johnstone, Glenn Milton Storr, 1998 The Cockatoos Edward John Mulawka, 2016-04-28 This reference book on the cockatoo family provides a comprehensive physical description of the various species of this exotic parrot the habitat they favor and their distribution and behaviors both in the wild and in captivity Their reproductive history is examined as is the possibility of breeding sufficient numbers in captivity to develop sustainable populations for re introduction to their original habitat should they become extinct in the wild The book explores the historical encounters of the various species with Europeans two centuries ago That early history provides considerable insight to the cockatoo's popularity and to efforts to breed them in captivity Many cockatoo species face a perilous future As their native forests are logged the cockatoos lose not only suitable nesting and roosting sites but native foods Additionally despite conservation laws governing the capture of wild cockatoos their desirability as an avian pet has spawned a worldwide illicit trade critically endangering some species to the point that they face extinction in the wild CSIRO List of Australian Vertebrates Mark Clayton, 2006 A fully updated new edition of The Action Plan for Australian Birds the definitive listing of Australia's vertebrates and their conservation status

2020 Stephen T. Garnett, G Barry Baker, 2021-12 The Action Plan for Australian Birds 2020 is the most comprehensive review of the status of Australia s avifauna ever attempted The latest in a series of action plans for Australian birds that have been produced every decade since 1992 it is also the largest The accounts in this plan have been authored by more than 300 of the most knowledgeable bird experts in the country and feature far more detail than any of the earlier plans This volume also includes accounts of over 60 taxa that are no longer considered threatened mainly thanks to sustained conservation action over many decades This extensive book covers key themes that have emerged in the last decade including the increasing impact of climate change as a threatening process most obviously in Queensland's tropical rainforests where many birds are being pushed up the mountains However the effects are also indirect as happened in the catastrophic fires of 2019 20 Many of the newly listed birds are subspecies confined to Kangaroo Island where fire destroyed over half the population But there are good news stories too especially on islands where there have been spectacular successes with predator control Such uplifting results demonstrate that when action plans are followed by action on the ground threatened species can indeed be recovered and threats alleviated Catalogue of Books in the Public Library of Western Australia, (Queen Victoria Jubilee Memorial) Public Library of Western Australia, Western Australia. Public Library, Perth, 1905 for Australian Birds 2010 Stephen Garnett, Judit Szabó, Guy Dutson, Guy C. L. Dutson, 2011 The Action Plan for Australian Birds 2010is the third in a series of action plans that have been produced at the start of each decade The book analyzes the International Union for Conservation of Nature IUCN status of all the species and subspecies of Australia s birds including those of the offshore territories For each bird the size and trend in their population and distribution has been analyzed using the latest iteration of IUCN Red List Criteria to determine their risk of extinction The book also provides an account of all those species and subspecies that are or are likely to be extinct Each categorization is justified on the basis of the latest research including much unpublished material that has been made available during workshops conducted with leading ornithologists and conservation biologists around the country as well as phone interviews and correspondence The result is the most authoritative account yet of the status of Australia s birds In this completely revised edition each account covers not only the 2010 status but provides a retrospective assessment of the status in 1990 and 2000 based on current knowledge taxonomic revisions and changes to the IUCN criteria and then reasons why the status of some taxa has changed over the last two decades Maps have been created specifically for the Action Plan based on vetted data drawn from the records of Birds Australia its members and its partners in many government departments The book contains some surprises some alarming some encouraging The status of some birds has improved over the last two decades as a result of dedicated conservation management Some may not have changed status but at least they are holding their own Many however are continuing to decline and a distressing number are new to the list There is also an increasing number of birds for which captive insurance populations need not only to be considered as a future option but actively pursued before it is too late But

this is not a book of lost causes It is a call for action to keep the extraordinary biodiversity we have inherited and pass the legacy to our children Every one of Australia s threatened taxa can be saved This book describes the populations of species at greatest risk and outlines ways we can turn them around KEY FEATURES Readily accessible status information with reasons for listing Synopsis of principal features that influence listing List of actions needed for conservation Includes specially Cuckoos of the World Johannes Erritzøe, Clive F.
