Handbook of Micromethods for the Biological Sciences Georg Keleti, William H. Lederer, 1974 Preparation of material for chemical analysis or biological characterization Microanalytical methods Biological characterization **Handbook of Micromethods for the Biological Sciences** Georg Keleti, William H. Lederer, 1973 This handbook has 106 procedures each specifically detailing a biochemical or microbiological method of preparation or analysis They are written in a concise step by step form Reagents are specified Exact methods of preparation are delineated Illustrations are provided where required to clarify a method Pref Indexed **Methods in Neurobiology** Robert Lahue, 2013-11-21 Rapid advances in knowledge have led to an increasing interest in neuro biology over the last several years These advances have been made possible at least in part by the use of increasingly sophisticated methodology Furthermore research in the most rapidly advancing areas is essentially multidisciplinary and is characterized by contributions from many investigators employing a variety of techniques While a grasp of fundamental neurobiological concepts is an obvious prerequisite for those who wish to follow or participate in this field critical awareness and evaluation of neurobiological research also requires an understanding of sophisticated methodologies The objective of *Methods in Neurobiology* is the development of such critical abilities The reader is exposed to the basic concepts principles and instrumentation of key methodologies and the application of each methodology is placed in the special context of neurobiological research The reader will gain familiarity with the terminology and procedures of each method and the ability to evaluate results in light of the particular features of neurobiological preparations and applications

National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1974 First multi year cumulation covers six years 1965-70 Research Methods in Neurochemistry Neville Marks, Richard Rodnight, 2013-11-27 This fifth volume of *Research Methods in Neurochemistry* represents a milestone in that it marks almost a decade since the inception of the series Over these ten years there has been an almost exponential growth in neuro chemistry accompanied by numerous technical developments This is the justification for our series inevitably we have only been able to cover a fraction of the methodological innovations of the last decade but we have tried as much as possible to create a balance between the different approaches and philosophies in the study of the chemical basis of brain function Thus our original format of grouping chapters under various headings for instance studies in intact tissues as distinct from studies describing constituents and isolated enzymes appears to be justified Studies on whole animals or tissues retaining cellular organization are vital in providing insights into the neurochemical mechanism underlying functional processes at the same time the eventual understanding of function can only be attained on the basis of knowledge of the molecular architecture of the tissue In the present volume Oldendorfs chapter on the transport of radiolabeled metabolites across the blood brain barrier illustrates one side of this equation whereas Poduslo s chapter on the separation of oligodendroglia cells provides new information on the role of these cells in myelogenesis and the distinctive chemical composition of glia as compared to
