Handbook of Proteolytic Enzymes, Volume 1 Alan J. Barrett, J. Fred Woessner, Neil D. Rawlings, 2012-12-02 Handbook of Proteolytic Enzymes Second Edition Volume 1 Aspartic and Metallo Peptidases is a compilation of numerous progressive research studies on proteolytic enzymes This edition is organized into two main sections encompassing 328 chapters This handbook is organized around a system for the classification of peptidases which is a hierarchical one built on the concepts of catalytic type clan family and peptidase The concept of catalytic type of a peptidase depends upon the chemical nature of the groups responsible for catalysis The recognized catalytic types are aspartic cysteine metallo serine threonine and the unclassified enzymes while clans and families are groups of homologous peptidases Homology at the level of a family of peptidases is shown by statistically significant relationship in amino acid sequence to a representative member called the type example or to another member of the family that has already been shown to be related to the type example Each chapter discusses the history activity specificity structural chemistry preparation and biological aspects of the enzyme This book will prove useful to enzyme chemists and researchers

Davie, 2009-01-15 Now more than ever thrombotic and thromboembolic disorders as well as related diseases such as malignancies arteriosclerosis diabetes mellitus hypertension and obesity are the leading causes of morbidity and mortality They have become urgent medical problems with serious economic consequences in industrialized and developing countries alike At the same time the impact of molecular biology and genetics on our understanding of thrombosis and hemostasis is rapidly growing stronger as well as our knowledge of regeneration and development of specific tissues organs and embryos Researchers are also constantly learning more about cardiovascular diseases as well as regulatory mechanisms for various intrinsic and extrinsic stimuli in viable tissues In this volume our intention has been to present the latest relevant information in molecular biology and genetics as well as the clinical implications of a better understanding of pathophysiology novel diagnostic methodologies and therapeutic applications for new methods of prevention in thrombosis hemostasis and related disorders including atherosclerosis The dramatic advances in knowledge of thrombosis hemostasis and vascular biology since the first publication of *Recent Advances in Thrombosis and Fibrinolysis* edited with Japanese colleagues in 1991 have required extensive revision in order to highlight and review recent progress in the field The editors also gratefully welcome the seven distinguished non Japanese authors who with their valuable contributions on subjects beyond the coverage by Japanese authors have made this new edition truly international *Programmed Cell Death in Higher Plants* E. Lam, H. Fukuda, J. Greenberg, 2000-12-31 The molecular mechanisms which determine whether the cells of a multicellular organism will live or commit suicide have become a popular field of research in biology during the last decade Cell death research in the plant field has also been

expanding rapidly in the past 5 years This special volume of Plant Molecular Biology seeks to bring together examples of a diverse array of experimental approaches in a single volume From the differentiation of tracheary elements in vascular plants to the more specialized cell death model of the aleurone in cereals this volume will bring the reader up to date with the characterization of different plant model systems that are currently being studied This endeavor should complement general overviews of plant cell death mechanisms that have been published elsewhere by providing more detailed information on various aspects of this field to interested graduate students and more senior biologists alike

Matrix Metalloproteinase Protocols Ian M. Clark,2008-02-05 Research in the matrix metalloproteinase field began with the demonstration by Gross and Lapi re in 1962 that resorbing tadpole tail expressed an enzyme that could degrade collagen gels These humble beginnings have led us to the elucidation of around twenty distinct vertebrate MMPs along with a variety of homologs from such diverse organisms as sea urchin plants nematode worm and bacteria This coupled with four known specific inhibitors of MMPs the TIMPs gives a complex picture Part I of Matrix Metalloproteinase Protocols provides the reader with a selective overview of the MMP arena and a chance to come to grips with where the field has been where it is and where it is going I hope that this complements all of the methodology that comes later Part II presents the reader with a diverse set of methods for the expression and purification of MMPs and TIMPs bringing together the long and often hard earned experience of a number of researchers Part III allows the reader to detect MMPs and TIMPs at both the protein and mRNA level whereas Part IV gives the ability to assay MMP and TIMP activities in a wide variety of circumstances
