Surface Mount Technology Ray P. Prasad,2012-12-06 Surface Mount Technology is not a technology of tomorrow but a technology of today It provides a quantum jump in the packaging technology to produce state of the art miniaturized electronic products However in order to take advantage of this technology a complete infrastructure must be put in place This requires considerable investment in human and capital resources Intel corporation has made these investments to keep its customers for components and systems on the leading edge of technology Based on the experience of putting this infrastructure in place for system products this book is written for managers who need to manage the risk during its implementation and the practicing engineers who need to improve the design and manufacturing processes for improved yield and cost reduction To accomplish this task I have not only culled the information from published materials but have also depended on input from both my colleagues in Intel and such outside organizations as the Institute of Interconnecting and Packaging Electronic Circuits IPC the Electronics Industries Association EIA and the Surface Mount Council But the underlying basis for this book has been my first hand experience in implementing this technology for Intel Systems Group and my experience at Boeing my previous employer In a fast changing technology like SMT it is very easy to have obsolete information even before the book is published For this reason I have concentrated on the basic principles and practice of the technology

Area Array Interconnection Handbook Karl J. Puttlitz,Paul A. Totta,2012-12-06 Microelectronic packaging has been recognized as an important enabler for the solid state revolution in electronics which we have witnessed in the last third of the twentieth century Packaging has provided the necessary external wiring and interconnection capability for transistors and integrated circuits while they have gone through their own spectacular revolution from discrete device to gigascale integration At IBM we are proud to have created the initial simple concept of flip chip with solder bump connections at a time when a better way was needed to boost the reliability and improve the manufacturability of semiconductors The basic design which was chosen for SLT Solid Logic Technology in the 1960s was easily extended to integrated circuits in the 70s and VLSI in the 80s and 90s Three I O bumps have grown to 3000 with even more anticipated for the future The package families have evolved from thick film SLT to thin film metallized ceramic to co fired multi layer ceramic A later family or ceramics with matching expansivity to sili con and copper internal wiring was developed as a predecessor of the chip interconnection revolution in copper multilevel submicron wiring Powerful server packages have been de veloped in which the combined chip and package copper wiring exceeds a kilometer All of this was achieved with the constant objective of minimizing circuit

delays through short efficient interconnects The Electronics Assembly Handbook Frank Riley, Electronic Packaging and Production, 2013-06-29 The assembly of electronic circuit boards has emerged as one of the most significant growth areas for robotics and automated assembly This comprehensive volume which is an edited collection of material mostly published in Assembly Engineering and Electronic Packaging and Production will provide an essential reference for engineers working in this field including material on Multi Layer Boards Chip on board and numerous case studies Frank J Riley is senior vice president of the Bodine Corporation and a world authority on assembly automation
