ecological science in decision making What factors govern the assembly of ecosystems and determine their response to various stressors How does Earth's climate system function and determine the distribution of life on Earth What factors control the size of populations How does fragmentation of the landscape affect the persistence of species on the landscape How does biological diversity influence ecosystem processes The book closes with a final chapter that addresses the need not only to understand ecological science but to put that science into an ecosystem conservation ethics perspective

Environmental Education and Advocacy Edward A. Johnson, Michael J. Mappin, 2005-03-03 Environmental education has often blurred the distinction between ecological science and environmental advocacy Growing public awareness of environmental problems and desire for action may be contributing to this blurring There is a need to clarify the distinction between the role of ecological science and the role of social and political values for the environment within environmental education This book addresses this need by examining the changing perspectives of ecology in education and the changing perspectives of education in environmental education Guidelines are provided for assessing the science and education perspectives within environmental education along with suggested frameworks for development of programs and resources that integrate current science education and action This book will be of interest to environmental educators ecologists interested in environmental education and curriculum and resource developers

Ecology and the

Environment Amy Tickle, 1995 *Ecology, Environmental Science and Conservation 2nd Edition* JS Singh | SP Singh | SR Gupta | Rishikesh Singh, The updated second edition of the book offers an innovative synthesis of fundamental ecological concepts and practical applications in environmental science and conservation. It is the first textbook on the subject by eminent Indian researchers and presents most of the examples from the Indian subcontinent. The book covers a wide range of topics including fundamental concepts required to comprehend the physical environment, population dynamics, community characteristics, patterns and gradients in biodiversity, ecosystem functioning and dynamics, and the study of biogeography. It also addresses applied topics such as environmental pollution, impact assessment, natural resource management, biodiversity conservation, ecosystem services, global climate change, ecosystem restoration, urban ecology, and sustainable development. The main issues are discussed within the sustainability framework, considering humans as part of ecosystems and recognising that sustainable development requires the integration of ecology with social sciences for policy formulation and implementation. The updated edition of the book aligns with the National Education Policy 2020 and the revised UGC Guidelines. It aims to meet the needs of students in basic and multidisciplinary courses in ecology and environmental science as well as professionals in agriculture, forestry, and geography at both the graduate and postgraduate levels.

Ecology and Empire Tom Griffiths, Libby Robin, 1997. Ecology and Empire forged a historical partnership of great power and one which particularly in the last 500 years radically changed human and natural history across the globe. This book scrutinizes European expansion from the perspectives of the so-called colonized peripheries, the settler societies. It begins with Australia as a prism through which to consider the relations between settlers and their lands but moves well beyond this to a range of lands of empire. It uses their distinctive ecologies and histories to shed new light on both the imperial and the settler environmental experience. Ecology and Empire also explores the way in which the science of ecology itself was an artifact of empire, drawing together the fields of imperial history and the history of science.

Ecology and the Environment Amy L. Tickle, 1996-01-01 **The Philosophy of Ecology** David R. Keller, Frank B. Golley, 2000. This is the first introductory anthology on the philosophy of ecology, edited by an ecologist and a philosopher. It illustrates the range of philosophical approaches available to ecologists and provides a basis for understanding the thinking on which many of today's environmental ideas are founded. Collectively, these seminal readings make a powerful statement on the value of ecological knowledge and thinking in alleviating the many problems of modern industrial civilization. Issues covered include the challenges of defining scientific ecology, tracing its genealogy, and distinguishing the science from various forms of ecological thinking, the ontology of ecological entities and processes, selected concepts of community, stability, diversity, and niche, the methodology of ecology, rationalism and empiricism, reductionism and holism, the significance of evolutionary law for ecological science.

J. Berry, 2011-09-15 Ecology and the Environment The Mechanisms Marring and Maintenance of Nature is the ninth title published in the Templeton Science and Religion Series in which scientists from a wide range of fields distill their experience and knowledge into brief tours of their respective specialties In this volume R J Berry a well known leader in the field of ecology describes the basic concepts of ecology and seeks to put them into a general context for a reader who lacks any scientific background Berry explores the implications of these basic concepts and how they affect human life and the decisions we have to make both as individuals and as members of a species that has colonized and influenced every part of the globe He points out that we are a part of the animal world but at the same time we are apart from it and he makes it clear that how we relate to our environment affects the quality of our life indeed it may affect our very survival Going beyond a simple introduction of concepts the book explores wider questions about the nature of humanity and how human ecology relates to humanness Berry proposes that we are more than machines or even advanced apes we are Homo divinus transformed from an organism descended from the same stock as the apes but qualitatively different and able to relate to a creator God The book argues that those who conclude otherwise are neglecting relevant data Berry offers the perfect introduction to these philosophical and theological issues but his work never loses sight of the practical issues either the kind that is increasingly being addressed by national and international environmental
