Ecology, Technology and Culture Wim Zweers, J. J. Boersema, 1994 *General Ecology* Erich Hörl, James Edward Burton, 2017-05-04 Ecology has become one of the most urgent and lively fields in both the humanities and sciences In a dramatic widening of scope beyond its original concern with the coexistence of living organisms within a natural environment it is now recognized that there are ecologies of mind information sensation perception power participation media behavior belonging values the social the political a thousand ecologies This proliferation is not simply a metaphorical extension of the figurative potential of natural ecology rather it reflects the thoroughgoing imbrication of natural and technological elements in the constitution of the contemporary environments we inhabit the rise of a cybernetic natural state with its corresponding mode of power Hence this ecology of ecologies initiates and demands that we go beyond the specificity of any particular ecology a general thinking of ecology which may also constitute an ecological transformation of thought itself is required In this ambitious and radical new volume of writings some of the most exciting contemporary thinkers in the field take on the task of revealing and theorizing the extent of the ecologization of existence as the effect of our contemporary sociotechnological condition together they bring out the complexity and urgency of the challenge of ecological thought one we cannot avoid if we want to ask and indeed have a chance of affecting what forms of life agency modes of existence human or otherwise will participate and how in this planet s future

Technology, Culture and Competitiveness Christopher Farrands, Michael Talalay, Roger Tooze, 2005-06-29 The first volume in a major new series this book will be an essential read for all those who need to deal with the causes and consequences of rapid technological change in an increasingly globalized world whether they be government policy makers managers of multi national corporations commentators on the international scene or specialists in and students of international politics economics and business studies The authors discuss three related areas How do we think about technology and international relations international political economy How does technology relate to competitiveness How does it influence our culture and how is it influenced by it In what sense is technology a fundamental component of national

competitive advantage and what ought national local and corporate policy to be in the light of this What is the relationship between technological innovation and global political and economic change Technology is discussed not just in an instrumental sense as a tool of power and an object of policy but equally in a transcendental sense as a key to shaping and structuring how we understand and interpret reality The final section of the book presents case studies of three core sectors of the world political economy finance aviation and automobiles

Using Words and Things Mark

Coeckelbergh, 2017-06-26 This book offers a systematic framework for thinking about the relationship between language and technology and an argument for interweaving thinking about technology with thinking about language The main claim of philosophy of technology that technologies are not mere tools and artefacts not mere things but crucially and significantly shape what we perceive do and are is re thought in a way that accounts for the role of language in human technological experiences and practices Engaging with work by Wittgenstein Heidegger McLuhan Searle Ihde Latour Ricoeur and many others the author critically responds to and constructs a synthesis of three extreme idealtype untenable positions 1 only humans speak and neither language nor technologies speak 2 only language speaks and neither humans nor technologies speak and 3 only technology speaks and neither humans nor language speak The construction of this synthesis goes hand in hand with a narrative about subjects and objects that become entangled and constitute one another Using Words and Things thus draws in central discussions from other subdisciplines in philosophy such as philosophy of language epistemology and metaphysics to offer an original theory of the relationship between language and philosophy of technology centered on use performance and narrative and taking a transcendental turn

Hunger: Theory, Perspectives and Reality Amitava

Mukherjee, 2017-11-30 Hunger is an issue which has been subject to much rigorous intellectual examination by economists philosophers sociologists NGOs and governments This volume provides a critical overview of current academic and political perspectives and then compares these views from the non hungry people with those of the hungry particularly from a broad range of poor communities in India Their views are gathered using participatory rural appraisal techniques and the scale of the material presented is unprecedented Not surprisingly the comparisons show that the perceptions of the hungry are fundamentally different from those of the non hungry It makes compelling suggestions about how best policy makers can attempt to eliminate hunger based on what the hungry themselves suggest The book also draws attention to the critical role of Common Property Resources and women in the fight against under nutrition which have so far been largely ignored

The Land beyond the Mists David Newbury, 2009-09-15 The horrific tragedies of Central Africa in the 1990s riveted the attention of the world But these crises did not occur in a historical vacuum By peering through the mists of the past the case studies presented in *The Land Beyond the Mists* illustrate the significant advances to have taken place since decolonization in our understanding of the pre colonial histories of Rwanda Burundi and eastern Congo Based on both oral and written sources these essays are important both for their methods viewing history from the perspective of local actors and for their

conclusions which seriously challenge colonial myths about the area

Modernization and the Crisis of Development in Africa Jeremiah I. Dibua, 2017-11-28 In this book Jeremiah I Dibua challenges prevailing notions of Africa's development crisis by drawing attention to the role of modernization as a way of understanding the nature and dynamics of the crisis and how to overcome the problem of underdevelopment. He specifically focuses on Nigeria and its development trajectory since it exemplifies the crisis of underdevelopment in the continent. He explores various theoretical and empirical issues involved in understanding the crisis including state, class, gender, and culture, often neglected in analysis from an interdisciplinary radical political economy perspective. This is the first book to adopt such an approach and to develop a new framework for analyzing Nigeria's and Africa's development crisis. It will influence the debate on the development dilemma of African and Third World societies and will be of interest to scholars and students of race and ethnicity, modern African history, class analysis, gender studies, and development studies.

Ethnoecology, Livelihood and Culture of The Karbis Somenath Bhattacharjee, Jushna Beypi and Rengmini Tokbipi, 2024-01-01 Northeast India is a rich zone of ethnic and cultural diversity. In Assam, the Karbis are numerically the third highest Tribal group. However, very few systematic Anthropological researches have been conducted on their indigenous knowledge and perspectives of ethno ecology. It can be noted that the Karbis have their own identical cultural practices and social customs with their unique ethno ecological approach. Primarily, they are dwelling in the Karbi Anglong district of Assam. The said district is geographically in a very strategic location in the hinterland of Nagaland, Meghalaya state, and Nagaon district of Assam. The present book is an attempt to have a detailed account on the little-known Karbi Tribal group of Northeast India from their ethno ecological perspectives. The book has focused primarily on the issues related to their origin and ethnic distribution, society, culture, traditional economic organization, religious beliefs, and practices, material culture as a whole. The present book is the first ethno ecological approach on the Karbis from an Anthropological perspective.

Scanlan, 2016-09-16 Although scholars have devoted much attention to the impact of technology on society they have tended to slight the question of how technology is affected by social systems The authors of this volume take precisely this approach in their examination of the Soviet model of development The book surveys the history and current state of science and technology in the USSR and its former satellites It then looks at the economic environment for technological innovation and examines the impact of the energy shock in the transitional economies of the region Finally it discusses the ecological devastation of the USSR and Eastern Europe its connection with the Soviet model and the prospects for remediation The central argument of the book is that the cultural and social factors and the legacy of the Soviet model will inevitable figure in the reconstruction of the East *Living in a Technological Culture* Hans Oberdiek, Mary Tiles, 2005-11-02 Technology is no longer confined to the laboratory but has become an established part of our daily lives Its sophistication offers us power beyond our human capacity which can either dazzle or threaten it depends

who is in control Living in a Technological Culture challenges traditionally held assumptions about the relationship between man and machine It argues that contemporary science does not shape technology but is shaped by it Neither discipline exists in a moral vacuum both are determined by politics rather than scientific inquiry By questioning our existing uses of technology this book opens up wider debate on the shape of things to come and whether we should be trying to change them now As an introduction to the philosophy of technology this will be valuable to students but will be equally engaging for the general reader *Technology and Culture* ,2000
