Energetic Food Webs John C. Moore, Peter C. de Ruiter, 2012-05-31 In ecosystems with many species food webs form highly complex networks of resource consumer interactions At the same time the food web as itself needs sufficient resources to develop and survive So in fact food web ecology is about how natural resources form the basis of biological communities in terms of species richness and abundances as well as how species are organised in communities on the basis of the resource availability and use The central theme of this book is that patterns in the utilisation of energy result from the trophic interactions among species and that these patterns form the basis of ecosystem stability The authors integrate the latest work on community dynamics ecosystem energetics and stability and in so doing attempt to dispel the categorisation of the field into the separate subdisciplines of population community and ecosystem ecology Energetic Food Webs represents the first attempt to bridge the gap between the energetic and species approaches to ecology
