Crustal Evolution of Southern Africa A. J. Tankard, Martin Martin, K. A. Eriksson, D. K. Hobday, D. R. Hunter, W. E. L. Minter, 2012-12-06 Syntheses of the geology of major areas of the Earth's crust are increasingly needed in order that the features of and the problems associated with the secular evolution of the continents can be understood by a wide audience Southern Africa is fortunate in having a remarkable variety of geological environments developed without many breaks over 3.8 Ga and many of the rock groups are household names throughout the geological world In one respect the geology of Southern Africa is particularly important cratonization clearly began as early as 3.0 Ga ago in contrast to about 2.5 Ga in most other continental areas such as North America This book documents very well the

remarkable change in tectonic conditions that took place between the Early and Mid Precambrian we have here evidence of the very earliest development of rigid lithospheric plates This book is a tribute to the multitudes of scientists who have worked out the geology of Southern Africa over many years and decades Whatever their discipline each provided a step in the construction of this fascinating story of 3.8 Ga of crustal development In the book the reader will find a detailed review of the factual data together with a balanced account of interpretative models without the indulgence of undue speculation One of its attractions is its multidisciplinary approach which provides a stimulating challenge to the reader

Proterozoic Crustal Evolution K.C. Condie, 1993-02-03 As a final product of the International Geological Correlation Program IGCP Project 217 this volume brings together significant advances in the understanding of Proterozoic crustal evolution This IGCP Project focussed on nine research objectives

- 1 Comparison of Archean and Proterozoic supracrustal assemblages to more fully understand differences between Archean and post Archean tectonic regimes
- 2 To more fully understand the geochemical differences between Archean and post Archean sediments and to evaluate the various factors that control sediment composition
- 3 From combined U Pb zircon and whole rock Sm Nd studies to see if the apparent 2.4-2.0 continental crust generation gap is real
- 4 To employ new techniques in the dating of individual zircons to more fully understand Proterozoic tectonic history and the role of crustal reworking
- 5 From trace element ratios and Nd isotopic data from basalts to better understand Proterozoic mantle evolution
- 6 To encourage more detailed studies of the anorogenic granite anorthosite association to better understand its origin and significance in terms of crustal evolution
- 7 From combined Nd Pb and Sr isotopic data to more precisely estimate the amount of new continental crust formed during the Proterozoic
- 8 To encourage joint P T and geochronological studies of Proterozoic and high grade terranes to better understand Proterozoic orogenesis
- 9 To try and understand why hydrothermal precious metal deposits are relatively rare in the Proterozoic compared to both the Archean and the Phanerozoic

The book should be of interest to professionals in the geosciences especially geochemists petrologists and structural geologists and graduate students in the same fields

Crustal Evolution and Metallogeny in the Northwestern Indian Shield Mihir Deb, 2000 The northwestern Indian Shield covering a major part of Rajasthan and parts of northern Gujarat northwestern Madhya Pradesh Haryana and Delhi is one of the most important repositories of a variety of mineral deposit types particularly of base metals Their metallogeny has been a topic of both academic and economic interest for more than five decades This volume presents in a systematic manner the essential features of all economically significant types of metallic mineral deposits in this region and considers their metallogeny in the perspective of crustal evolution of the northwestern Indian shield Current concepts problems and the probable trends of future research are highlighted Leading geoscientists with first hand knowledge of this Precambrian terrane have contributed to this volume The book will be of interest to exploration geologists researchers and postgraduate students concerned with Precambrian geology and
