Proceedings:**

Graph Transformations Hartmut Ehrig, Gregor Engels, Francesco Parisi-Presicce, Grzegorz Rozenberg, 2004-11-11 ICGT 2004 was the 2nd International Conference on Graph Transformation following the first one in Barcelona 2002 and a series of six international workshops on graph grammars with applications in computer science between 1978 and 1998 ICGT 2004 was held in Rome Italy Sept 29 Oct 1 2004 under the auspices of the European Association for Theoretical Computer Science EATCS the European Association of Software Science and Technology EASST and the IFIP WG 1.3 Foundations of Systems Specification The scope of the conference concerned graphical structures of various kinds like graphs diagrams visual sentences and others that are useful when describing complex structures and systems in a direct and intuitive way These structures are often augmented with formalisms that add to the static description a further dimension allowing for the modelling of the evolution of systems via all kinds of transformations of such graphical structures The field of graph transformation is concerned with the theory applications and implementation issues of such formalisms The theory is strongly related to areas such as graph theory and graph algorithms formal language and parsing theory the theory of concurrent and distributed systems formal specification and verification logic and semantics The application areas include all those fields of computer science information processing engineering and the natural sciences where static and dynamic modelling using graphical structures and graph transformations respectively play important roles In many of these areas tools based on graph transformation technology have been implemented and used

Uncertain Automata and Uncertain Graph Grammar Takaaki Fujita, Florentin Smarandache, 2025-01-01 Graph theory has been widely studied resulting in numerous applications across various fields Among its many topics Automata and Graph Grammar have emerged as significant areas of research This paper delves into these concepts emphasizing their adaptation to uncertain frameworks like Fuzzy Neutrosophic Vague Turiyam Neutrosophic and Plithogenic systems By integrating uncertainty into traditional graph theoretical models the paper aims to address ongoing research challenges and expand the scope of these models

Neutrosophic Sets and Systems, vol. 74/2024 {Special Issue: Advances in SuperHyperStructures and Applied Neutrosophic Theories} Florentin Smarandache, Mohamed Abdel-Basset, Maikel Leyva-Vázquez, 2024-12-16 This volume contains the proceedings of the conference held at the University of Guayaquil on November 28 and 29 2024 featuring contributions from researchers representing Colombia Cuba Ecuador Spain the United States Greece Japan Mexico and Peru The conference focused on SuperHyperStructures and Applied Neutrosophic Theories commemorating the 30th anniversary of neutrosophic theories and their extensive applications The topic of SuperHyperStructures and Neutrosophic SuperHyperStructures explores advanced mathematical frameworks built on powersets of a set extending to higher orders SuperHyperStructures are constructed using all non empty subsets of while Neutrosophic SuperHyperStructures incorporate

the empty set representing indeterminacy These structures model real world systems where elements are organized hierarchically from sets to sub sets and beyond enabling the analysis of complex and indeterminate relationships

Symbolic model generation for graph properties Schneider, Sven, Lambers, Leen, Orejas, Fernando, 2017-05-09 Graphs are ubiquitous in Computer Science For this reason in many areas it is very important to have the means to express and reason about graph properties In particular we want to be able to check automatically if a given graph property is satisfiable Actually in most application scenarios it is desirable to be able to explore graphs satisfying the graph property if they exist or even to get a complete and compact overview of the graphs satisfying the graph property We show that the tableau based reasoning method for graph properties as introduced by Lambers and Orejas paves the way for a symbolic model generation algorithm for graph properties Graph properties are formulated in a dedicated logic making use of graphs and graph morphisms which is equivalent to firstorder logic on graphs as introduced by Courcelle Our parallelizable algorithm gradually generates a finite set of so called symbolic models where each symbolic model describes a set of finite graphs i e finite models satisfying the graph property The set of symbolic models jointly describes all finite models for the graph property complete and does not describe any finite graph violating the graph property sound Moreover no symbolic model is already covered by another one compact Finally the algorithm is able to generate from each symbolic model a minimal finite model immediately and allows for an exploration of further finite models The algorithm is implemented in the new tool AutoGraph

Graph Transformation for Software Engineers Reiko Heckel, Gabriele Taentzer, 2020-05-13 This book is an introduction to graph transformation as a foundation to model based software engineering at the level of both individual systems and domain specific modelling languages The first part of the book presents the fundamentals in a precise yet largely informal way Besides serving as prerequisite for describing the applications in the second part it also provides a comprehensive and systematic survey of the concepts notations and techniques of graph transformation The second part presents and discusses a range of applications to both model based software engineering and domain specific language engineering The variety of these applications demonstrates how broadly graphs and graph transformations can be used to model analyse and implement complex software systems and languages This is the first textbook that explains the most commonly used concepts notations techniques and applications of graph transformation without focusing on one particular mathematical representation or implementation approach Emphasising the research and engineering methodologies used it will be a valuable resource for graduate students practitioners and researchers in software engineering foundations of programming and formal methods
