Sonic Flux Christoph Cox,2018-10-22 From Edison s invention of the phonograph through contemporary field recording and sound installation artists have become attracted to those domains against which music has always defined itself noise silence and environmental sound Christoph Cox argues that these developments in the sonic arts are not only aesthetically but also philosophically significant revealing sound to be a continuous material flow to which human expressions contribute but which precedes and exceeds those expressions Cox shows how over the course of the twentieth and twenty first centuries philosophers and sonic artists have explored this sonic flux Through the philosophical analysis of works by John Cage Maryanne Amacher Max Neuhaus Christian Marclay and many others *Sonic Flux* contributes to the development of a materialist metaphysics and poses a challenge to the prevailing positions in cultural theory proposing a realist and materialist aesthetics able to account not only for sonic art but for artistic production in general

The Prosthetic Tongue Katie Chenoweth,2019-11-01 Of all the cultural revolutions brought about by the development of printing technology during the sixteenth century perhaps the most remarkable but least understood is the purported rise of European vernacular languages It is generally accepted that the invention of printing constitutes an event in the history of language that has profoundly shaped modernity and yet the exact nature of this transformation the mechanics of the event has remained curiously unexamined In *The Prosthetic Tongue* Katie Chenoweth explores the relationship between printing and the vernacular as it took shape in sixteenth century France and charts the technological reinvention of French across a range of domains from typography orthography and grammar to politics pedagogy and poetics Under Fran ois I the king known in his own time as the Father of Letters both printing and vernacular language emerged as major cultural and political forces Beginning in 1529 French underwent a remarkable transformation as printers and writers began to reimagine their mother

tongue as mechanically reproducible The first accent marks appeared in French texts the first French grammar books and dictionaries were published phonetic spelling reforms were debated modern Roman typefaces replaced gothic scripts and French was codified as a legal idiom This was Chenoweth argues a veritable new media moment in which the print medium served as the underlying material apparatus and conceptual framework for a revolutionary reinvention of the vernacular Rather than tell the story of the origin of the modern French language however she seeks to destabilize this very notion of origin by situating the cultural formation of French in a scene of media technology and reproducibility No less than the paper book issuing from sixteenth century printing presses the modern French language is a product of the age of mechanical reproduction **What makes written words so special to the brain?** Gui Xue,Urs Maurer,Mohamed L

Seghier,2015-01-22 Reading is an integral part of life in today s information driven societies Since the pioneering work of Dejerine on word blindness in brain lesioned patients the literature has increased exponentially from neuropsychological case reports to mechanistic accounts of word processing at the behavioural neurofunctional and computational levels tapping into diverse aspects of visual word processing These studies have revealed some exciting findings about visual word processing including how the brain learns to read how changes in literacy impact upon word processing strategies and whether word processing mechanisms vary across different alphabetic logographic or artificial writing systems Other studies have attempted to characterise typical and atypical word processes in special populations in order to explain why dyslexic brains struggle with words how multilingualism changes the way our brains see words and what the exact developmental signatures are that would shape the acquisition of reading skills Exciting new insights have also emerged from recent studies that have investigated word stimuli at the system network level by looking for instance at how the reading system interacts with other cognitive systems in a context dependent fashion how visual language stimuli are integrated into the speech processing streams how both left and right hemispheres cooperate and interact during word processing and what the exact contributions of subcortical and cerebellar regions to reading are The contributions to this Research Topic highlight the latest findings regarding the different issues mentioned above particularly how these findings can explain or model the different processes mechanisms pathways or cognitive strategies by which the human brain sees words The introductory editorial summarising the contributions included here highlights how varieties of behavioural tests and neuroimaging techniques can be used to investigate word processing mechanisms across different alphabetic and logographic writing systems
