boggling nature of the universe an excellent book The Wall Street Journal We've long understood black holes to be the points at which the universe as we know it comes to an end Often billions of times more massive than the Sun they lurk in the inner sanctum of almost every galaxy of stars in the universe They're mysterious chasms so destructive and unforgiving that not even light can escape their deadly wrath Recent research however has led to a cascade of new discoveries that have revealed an entirely different side to black holes As astrophysicist Caleb Scharf reveals in *Gravity's Engines* these chasms in space time don't just vacuum up everything that comes near them they also spit out huge beams and clouds of matter Black holes blow bubbles Scharf masterfully explains how these bubbles profoundly rearrange the cosmos around them Engaging with our deepest questions about the universe he takes us on an intimate journey through the endlessly colorful place we call our galaxy and reminds us that the Milky Way sits in a special place in the cosmic zoo a sweet spot of properties Is it coincidental that we find ourselves here at this place and time Could there be a deeper connection between the nature of black holes and their role in the universe and the phenomenon of life We are after all made of the stuff of stars A n excellent overview of the state of black hole research to explain why black holes are so important Scharf provides a tour of much of modern astronomy and cosmology along with some requisite history an impressive feat for such a relatively short book *Ars Technica* A wonderfully detailed tapestry of what modern astronomy is all about from the complexities of cosmic microwave background studies to the X-ray mapping of galaxy clusters Nature Highly recommended Library Journal starred review
