Great Ape Project:

The Great Ape Project Paola Cavalieri, Peter Singer, 1994-12-15 With such assertions throughout it is no wonder that The Great Ape Project has been embroiled in controversy even before its American publication *The Great Ape Project Census*, 2003 **The Great Ape Project**, 1996 **The Great Ape Project and Humanity** Rachael Figueroa, 2012

Case Studies in Environmental Ethics Patrick George Derr, Edward M. McNamara, 2003 A collection of more than 40 case studies covering diverse topics such as genetic engineering aesthetics pollution animal rights population and resource management Case Studies in Environmental Ethics is intended as a supplemental book for college courses primarily in environmental ethics Each case presents factual information on a particular topic followed by a discussion of the ethical implications of each topic and several insightful discussion questions Great Ape Conservation Act of 2000 United States. Congress. Senate. Committee on Environment and Public Works, 2000 Great Apes and Humans Benjamin B. Beck, Tara S. Stoinski, Michael Hutchins, Terry L. Maple, Bryan Norton, 2014-05-27 The great apes gorillas chimpanzees bonobos and orangutans are known to be our closest living relatives Chimpanzees in particular share 98 percent of our DNA and scientists widely agree that they exhibit intellectual abilities long thought to be unique to humans such as self awareness and the ability to interpret the moods and identify the needs of others The close relation of apes to humans raises important ethical questions Are they better protected in the wild or in zoos Should they be used in biomedical research Should they be afforded the same legal protections as humans Great Apes and Humans is the first book to present a spectrum of viewpoints on human responsibilities toward great apes A variety of field biologists academic scientists zoo professionals psychologists sociologists ethicists and legal scholars consider apes in both the wild and captivity They present sobering statistics on the declining numbers of wild apes specifically discussing the decimation of great ape populations due to wild game consumption They explore the role of apes in the educational missions of zoos as well as the need for sanctuaries for wild ape orphans and former research subjects After examining the social division between apes and humans from historical evolutionary and cognitive perspectives they conclude by reviewing the current moral and legal status of great apes as well as how apes cognitive skills inform these issues Although this provocative book contains many different opinions the uniting concern of the contributors is the safety and well being of great apes Only by continuing the dialogue so clearly presented here can we hope to ensure their future *Babies and Beasts* Daniel A. Dombrowski, 1997 The Singer Regan debate Reciprocity Frey's challenge The criticisms of Leahy and Carruthers The great ape project and slavery The Nozick Rachels debate *The Neglected Ape* Biruté M.F. Galdikas, R.D. Nadler, N. Rosen, Lori K. Sheeran, 2013-11-11 The orangutan is the most highly endangered species of great ape Orangutans are threatened by deforestation poaching the illegal pet trade and the isolation and fragmentation of dwindling wild populations Their conservation is impeded by certain aspects of their ecology e.g. a rain forest habitat and certain features of their life history e.g. an eight to twelve year interbirth interval Added to the U.S.

Endangered Species List in 1970 the orangutan is now clearly on the road to extinction The number of wild orangutans in Borneo and Sumatra is currently estimated to have decreased to between 12 300 and 20 571 individuals Only 2% of original orangutan habitat is protected and some of these areas are now being destroyed Clearly attention to ecology demography censusing rehabilitation and conservation is essential if the orangutan is to survive in the wild beyond the next century The protection of orangutans is a complex multifaceted problem involving such pressing issues as human poverty overpopulation and the economic development of Southeast Asia Although the orangutan has been placed in Appendix I of the Convention on International Trade in Endangered Species of Wild Fauna and Flora CITES more orangutans were sold illegally in Taiwan between 1990 and 1993 than are housed in all the world's zoos In the past scientific and public attention has centered on the African apes For this reason the sole Asian great ape the orangutan has been called the neglected ape

Species of Contagion Ray Carr, 2022-02-17 *Species of Contagion* examines the political and social implications of xenotransplantation for bodies nations and species Scientists are demonstrating a renewed interest in developing transplants for humans with tissues from pigs with the aid of genetic engineering techniques immunosuppressant drugs and novel

cellular technologies Yet some argue that these transspecies promiscuities threaten to enable new viruses to emerge in human populations Drawing on the later works of Foucault this book analyses contemporary power relations in animal to human transplantation research ranging across governmental regulation scientific understandings of infectious disease and animal ethics While many xenotransplantation practices resonate with a security approach that renders uncertainty an inherent condition of life and encourages adaptation across species boundaries government regulation and industry also reinscribe sovereign boundaries of bodies species and nations Species of Contagion illustrates the variation in the cultural and scientific imaginaries that governments and industry bring to bear on the problematic of xenotransplantation

Animals as Persons Gary Lawrence Francione, 2008 Gary L Francione explains our historical and contemporary attitudes about animals by distinguishing the issue of animal use from that of animal treatment He then presents a theory of animal rights that focuses on the need to accord all sentient nonhumans the right not to be treated as property **United States Code** United States, 2018 **Disease, Health and Ape Conservation** Arcus Foundation, 2024-05-30 An objective analysis of relevant issues and case studies to further the ape conservation agenda around disease and health *International Environmental Law, Policy, and Ethics* Alexander Gillespie, 2014 This second edition of *International Environmental Law Policy and Ethics* revises and expands this groundbreaking study into the question of why the environment is protected in the international arena This question is rarely asked because it is assumed that each member of the international community wants to achieve the same ends However in his innovative study of international environmental ethics Alexander Gillespie explodes this myth He shows how nations like individuals create environmental laws and policies which are continually inviting failure as such laws can often be riddled with inconsistencies and be ultimately contradictory in purpose Specifically he seeks a nexus between the reasons why nations protect the environment how these reasons are reflected in law and policy and what complications arise from these choices This book takes account of the numerous developments in international environmental law and policy that have taken place the publication of the first edition most notably at the 2002 World Summit on Sustainable Development and the 2012 Rio 20 United Nations Conference on Sustainable Development Furthermore it addresses recent debates on the economic value of nature and the problems of the illegal trade in species and toxic waste The cultural context has also been considerably advanced in the areas of both intangible and tangible heritage with increasing attention being given to conservation wildlife management and the notion of protected areas The book investigates the ways in which progress has been made regarding humane trapping and killing of animals and how in contrast the Great Apes initiative and similar work with whales have failed Finally the book addresses the fact that while the notion of ecosystem management has been embraced by a number of environmental regimes it has thus far failed as an international philosophy **United States Code, 2006, V. 10, Title 16, Conservation, Sections 791-End, to Title 17, Copyrights , An Ape Ethic and the Question of Personhood** Gregory F. Tague, 2020-03-05 Gregory F Tague s An Ape

Ethic and the Question of Personhood argues that great apes are moral individuals because they engage in a land ethic as ecosystem engineers to generate ecologically sustainable biomes for themselves and other species Tague shows that we need to recognize apes as eco engineers in order to save them and their habitats and that in so doing we will ultimately save earth's biosphere The book draws on extensive empirical research from the ecology and behavior of great apes and synthesizes past and current understanding of the similarities in cognition social behavior and culture found in apes Importantly this book proposes that differences between humans and apes provide the foundation for the call to recognize forest personhood in the great apes While all ape species are alike in terms of cognition intelligence and behaviors there is a vital contrast unlike humans great apes are efficient ecological engineers Therefore simian forest sovereignty is critical to conservation efforts in controlling global warming and apes should be granted dominion over their tropical forests Weaving together philosophy biology socioecology and elements from eco psychology this book provides a glimmer of hope for future acknowledgment of the inherent ethic that ape species embody in their eco centered existence on this planet People, Property, Or Pets? Marc D. Hauser, Fiery Cushman, Matthew Kamen, 2006 Publisher Description *Apes and Human Evolution* Russell H. Tuttle, 2014-02-17 Russell Tuttle synthesizes a vast literature in primate evolution and behavior to explain how apes and humans evolved in relation to one another and why humans became a bipedal tool making culture inventing species distinct from other hominoids He refutes the theory that we are sophisticated instinctively aggressive and destructive killer apes
