sq mi The reef is located in the Coral Sea off the coast of Queensland Australia The Great Barrier Reef can be seen from outer space and is the world s biggest single structure made by living organisms This reef structure is composed of and built by billions of tiny organisms known as coral polyps It supports a wide diversity of life and was selected as a World Heritage Site in 1981 CNN labelled it one of the seven natural wonders of the world The Queensland National Trust named it a state icon of Queensland A large part of the reef is protected by the Great Barrier Reef Marine Park which helps to limit the impact of human use such as fishing and tourism Other environmental pressures on the reef and its ecosystem include runoff climate change accompanied by mass coral bleaching and cyclic population outbreaks of the crown of thorns starfish According to a study published in October 2012 by the Proceedings of the National Academy of Sciences the reef has lost more than half its coral cover since 1985 The Great Barrier Reef has long been known to and used by the Aboriginal Australian and Torres Strait Islander peoples and is an important part of local groups cultures and spirituality The reef is a very popular destination for tourists especially in the Whitsunday Islands and Cairns regions Tourism is an important economic activity for the region generating over AUD 3 billion per year

Dugong ,2002 The dugong Dugong dugon is the only herbivorous mammal that is strictly marine It has a range spanning some 37 countries including tropical and subtropical coastal and island waters This plan presents a global overview of the status of the dugong and its management throughout its range It contains information on dugong distribution and abundance threatening processes legislation and existing and suggested research and management initiatives for the countries and territories in the dugong s known range It is hoped that the comparative information provided will enable individual countries to develop their own more detailed conservation plans Queensland's Threatened Animals Lee K Curtis,2012-02-01 Queensland is home to 70% of Australia s native mammals 226 species over 70% of native birds 630 species just over half of the nation s native reptiles 485 and native frogs 127 and more than 11 000 native plant species Hundreds of these have a threatened status in Queensland In order for Queensland to maintain and recover a healthy biodiversity we must address the serious problems faced by our natural environment habitat loss inappropriate land management change in fire regimes pollution of natural resources proliferation of invasive species and climate change This book features up to date distribution data photos and maps for most of Queensland s threatened animals It also includes a comprehensive list of resources with key state national and international organisations involved in the recovery and management of threatened species Queensland s Threatened Animals will provide vital information to scientists educators business entities government agencies students community groups environmental NGOs regional NRMs and potential volunteers Coral Reefs of Australia Sarah M. Hamylton,Pat Hutchings,Ove Hoegh-Guldberg,2022-11-02 Australia s coral reefs stretch far and wide covering 50 000 square kilometres from the Indian Ocean in the West to the Pacific Ocean in the East They have been viewed as a bedrock of coastal livelihoods as uncharted and perilous nautical hazards as valuable natural resources and as unique natural wonders with secrets waiting to be unlocked Australia s coral

reefs have sustained a global interest as places to visit and as objects of study science protection and conservation Coral Reefs of Australia examines our evolving relationship with coral reefs and explores their mystery and the fast pace at which they are now changing Corals are feeling the dramatic impacts of global climate change having undergone several devastating mass coral bleaching events dramatic species range shifts and gradual ocean acidification This comprehensive and engaging book brings together the diverse views of Indigenous Australians coral reef scientists managers and politicians to reveal how we interact with coral reefs focussing on Indigenous culture coastal livelihoods exploration discovery scientific research and climate change It will inform and inspire readers to learn more about these intriguing natural phenomena and how we can protect coral reefs for the future Cultural sensitivity Readers are warned that there may be words descriptions and terms used in this book that are culturally sensitive and which might not normally be used in certain public or community contexts While this information may not reflect current understanding it is provided by the author in a historical context This publication may also contain quotations terms and annotations that reflect the historical attitude of the original author or that of the period in which the item was written and may be considered inappropriate today Aboriginal and Torres Strait Islander peoples are advised that this publication may contain the names and images of people who have passed away

The Great Barrier Reef Ben Daley, 2014-07-17 The Great Barrier Reef is located along the coast of Queensland in north east Australia and is the world's largest coral reef ecosystem Designated a World Heritage Area it has been subject to increasing pressures from tourism fishing pollution and climate change and is now protected as a marine park This book provides an original account of the environmental history of the Great Barrier Reef based on extensive archival and oral history research It documents and explains the main human impacts on the Great Barrier Reef since European settlement in the region focusing particularly on the century from 1860 to 1960 which has not previously been fully documented yet which was a period of unprecedented exploitation of the ecosystem and its resources The book describes the main changes in coral reefs islands and marine wildlife that resulted from those impacts In more recent decades human impacts on the Great Barrier Reef have spread accelerated and intensified with implications for current management and conservation practices There is now better scientific understanding of the threats faced by the ecosystem Yet these modern challenges occur against a background of historical levels of exploitation that is little known and that has reduced the ecosystem's resilience The author provides a compelling narrative of how one of the world's most iconic and vulnerable ecosystems has been exploited and degraded but also how some early conservation practices emerged

Short,2019-08-29 This book describes the entire coast and beaches

and barrier systems of Australia. It covers the coastal processes and systems that form and impact Australia's 30 000 km coast, 12 000 beaches and 2750 barrier systems. These processes include geology, geomorphology, climate, waves, tides, currents, sediment supply as well as coastal ecosystems. The coast is divided into tropical, northern and southern temperate provinces, within which are seven divisions, 23 regions and 354 coastal sediment compartments, each of which is described in detail in the 34 chapters. Within these systems are the full range of wave through tide dominated beaches and barriers ranging from cheniers to massive transgressive dune systems together with a range of onshore and longshore sand transport systems. This is an up to date reference for the entire coast, its present condition and likely responses to the impacts of climate change.
