

Consider the below graph $G(V, E)$, and let's say that we need to derive its square, which means the value of k is 2.

So the graph will result into the graph on the right.

Note that the vertices 1 and 3 are connected because there exists a path of length two or less in the original graph..

Similarly there exists paths of length two or less between $\{2, 4\}$, $\{3, 5\}$, $\{4, 1\}$, $\{5, 2\}$, hence these vertices are connected in the power graph.

This concludes that all the graph are the first power of themselves. Which means if value of k is 1 then we get the same graph? And if the adjacency matrix of G is A then each cell (i, j) of A^1 will give you the number of paths of length 1 between i and j .

Lets take another example. Again let the value of k is 2. Consider the graph below.

The edges $\{1,3\}$, $\{2,3\}$, $\{3,4\}$, $\{4,6\}$, $\{5,1\}$ and $\{6,2\}$ are connected because they have a path length of 2 or less between them in the original graph.

The edges $\{1,4\}$, $\{2,5\}$ and $\{3,6\}$ are not connected because the length of the path between them is three which is more than two.
