Computer Graphics Techniques David F. Rogers, Rae Earnshaw, 2001-10-31 In the third paper in this chapter Mike Pratt provides an historical introduction to solid modeling He presents the development of the three most frequently used techniques cellular subdivision constructive solid modeling and boundary representation Although each of these techniques developed more or less independently today the designer's needs dictate that a successful system allows access to all of these methods For example sculptured surfaces are generally represented using a boundary representation However the design of a complex vehicle generally dictates that a sculptured surface representation is most efficient for the skin while constructive solid geometry representation is most efficient for the internal mechanism Pratt also discusses the emerging concept of design by feature line Finally he addresses the very important problem of data exchange between solid modeling systems and the progress that is being made towards developing an international standard With the advent of reasonably low cost scientific workstations with reasonable to outstanding graphics capabilities scientists and engineers are increasingly turning to computer analysis for answers to fundamental questions and to computer graphics for presentation of those answers Although the current crop of workstations exhibit quite impressive computational capability they are still not capable of solving many problems in a reasonable time frame e.g. executing computational fluid dynamics and finite element codes or generating complex ray traced or radiosity based images In the sixth chapter Mike Muuss of the U S
