June 2014

The general purpose programming language **C** is the basic language in computer programming but at the same the application of this language is most widely used. **C language** is used to mimic text documents, mathematical and statistical operations and can also be used to create **animation programs**. With the help of the C language, programs which create **computer graphics** can be made. In the script of the C language, you can input the logic of the code that can be used for designing **graphics programs** for various **animation needs**, like that of **car animation**.

## Graphics Programming In C:

Graphics Programming in C++ Mark Walmsley, 2012-12-06 This is a book about computer graphics. It is aimed primarily at anyone wishing to develop graphics applications for Windows 98 and attempts to provide a quick and clear introduction to the subject without encumbering the reader in a mass of extraneous details. The application of object oriented techniques to graphics programming is a principal theme throughout the text and most of the software is written in C so a familiarity with C/C++ will be helpful for a fuller introduction to the C language than is possible here. Consult the book *Programming in C* ISBN 0 85934 435 5. Beyond this only a general background in computing and/or mathematics is assumed and whenever new ideas are encountered they are fully explained with the aid of line drawings and 10 also introduces the illustrative coding examples. For those brave enough chapter topic of 80 x86 assembly language programming without dedicated graphics hardware this is still the best way to produce really snappy animation code.
