What if it Looks Like	What it is	When to Use it	What to Remember
	Scatter Plot	Reporting Relationships/Correlations Between Different Variables	When Using More than 10 DataPoints. Place in a Horizontal Axis.
	Column Chart	Showing Change Over Time Between Two Variables with the Same Unit of Measurement and Comparable Sizes and is Oriented Vertically.	Use When You Want to Show Minimum and Maximum Values.
	Bar Chart	Comparing Data Across Different Categories and is Oriented Horizontally.	Place Your Values on the x-axis, Categories on the y-axis, Use When the Number of Categories is Between 5 and 8.
	Line Chart	Showing Data Trends Over Time but Have too Big Dataset for a Column or Bar.	Great When the Number of Categories is 8+ and Works Well in Combination With Bar Charts.
	Combination Chart	Comparing Two Variables With Different units of Measurement or Sizes.	Great to Use When you Want to Measure Values that are Significantly Different in Range.
	Pie Chart	Showing Relative Proportions (or Even Percentages).	The Data Set Must Represent Part of a Whole, and Data Should be on Comparable Sizes so Nothing is Dwarfed.
	Stacked Column	Showing the Composition of 5-8 Categories.	This Follows the Same Rules of a Pie Graph, But With More Categories.
	Stacked Area	Emphasizing the Magnitude of Change Over Time With Fewer than 8 Data Points.	Use this to Show the Trend of Compositions.
	Histogram	Showing the Distribution of Data.	Use this When you Want to Show the Distribution of Data Across Groups.
	Venn Diagram	Showing Overlapping Data Sets.	Consider this for Attribution Modeling No Overlap = No Attribution Problems.

Graphs and Their Uses Oystein Ore, 1990 Classic text on graph theory brought up to date by Robin Wilson himself a best selling maths author **Polygraphs in the Workplace** United States. Congress. House. Committee on Education and Labor. Subcommittee on Employment Opportunities, 1986 *Graph Transformations* Hartmut Ehrig, 2004-09-17 This book constitutes the refereed proceedings of the Second International Conference on Graph Transformation ICGT 2004 held in Rome Italy in September October 2004 The 26 revised full papers presented together with three invited contributions and summaries of 2 tutorials and 5 workshops were carefully reviewed and selected from 58 submissions The papers are organized in topical sections on integration technology chemistry and biology graph transformation concepts DPO theory for high level structures analysis and testing graph theory and algorithms application conditions and logic transformation of special structures and object orientation **Applied Graph Theory in Computer Vision and Pattern Recognition** Abraham Kandel, Horst Bunke, Mark Last, 2007-04-11 Graph theory has strong historical roots in mathematics especially in topology Its birth is usually associated with the four color problem posed by Francis Guthrie 1 in 1852 but its real origin probably goes back to the Seven Bridges of Königsberg 2 problem proved by Leonhard Euler in 1736 A computational solution to these two completely different problems could be found after each problem was abstracted to the level of a graph model while ignoring such irrelevant details as country shapes or cross river distances In general a graph is a nonempty set of points vertices and the most basic information preserved by any graph structure refers to adjacency relationships edges between some pairs of points In the simplest graphs edges do not have to hold any attributes except their endpoints but in more sophisticated graph structures edges can be associated with a direction or assigned a label Graph vertices can be labeled as well A graph can be represented graphically as a drawing vertex dot edge arc but as long as every pair of adjacent points stays connected by the same edge the graph vertices can be moved around on a drawing without changing the underlying graph structure The expressive power of the graph models placing a special emphasis on connectivity between objects has made them the models of choice in chemistry physics biology and other fields Conference on the Use of BCG in Therapy of Cancer , 1974 Edexcel Higher David Baker, 2001 Planned developed and written by practising classroom teachers with a wide variety of experience in schools this maths course has been designed to be enjoyable and motivating for pupils and teachers The course is open and accessible to pupils of all abilities and backgrounds and is differentiated to provide material which is appropriate for all pupils It provides spiral coverage of the curriculum which involves regular revisiting of key concepts to promote familiarity through practice This book designed for the higher level of the GCSE adheres to the Edexcel specification Child Development and the Use of Technology: Perspectives, Applications and Experiences Blake, Sally, Winsor, Denise L., Allen, Lee, 2011-11-30 Children experience technology in both formal and informal settings as they grow and develop Despite research indicating the benefits of technology in early childhood

education the gap between parents teachers and children continues to grow as our new generation of children enters early childhood classrooms Child Development and the Use of Technology Perspectives Applications and Experiences addresses major issues regarding technology for young children providing a holistic portrait of technology and early childhood education from the views of practitioners in early childhood education instructional design technology special education and mathematics and science education Consisting of fifteen chapters developed by multidisciplinary teams this book includes information advice and resources from practitioners professionals and university faculty engaged in early childhood education and instructional design technology

Interconnection Networks and Mapping and Scheduling Parallel Computations Derbiau Frank Hsu, Arnold L. Rosenberg, Dominique Sotteau, 1995 The interconnection network is one of the most basic components of a massively parallel computer system Such systems consist of hundreds or thousands of processors interconnected to work cooperatively on computations One of the central problems in parallel computing is the task of mapping a collection of processes onto the processors and routing network of a parallel machine Once this mapping is done it is critical to schedule computations within and communication among processors so that the necessary inputs for a process are available where and when the process is scheduled to be computed This book contains the refereed proceedings of a DIMACS Workshop on Massively Parallel Computation held in February 1994 The workshop brought together researchers from universities and laboratories as well as practitioners involved in the design implementation and application of massively parallel systems Focusing on interconnection networks of parallel architectures of today and of the near future the book includes topics such as network

Typological Change in Chinese Syntax Dan Xu, 2006 This new interpretation of the early history of Chinese argues that Old Chinese was typologically a mixed language It shows that though its dominant word order was subject verb object this coexisted with subject object verb Professor Xu demonstrates that Old Chinese was not the analytic language it has usually been assumed to be and that it employed morphological and lexical devices as well as syntactic means She describes the typological changes that have taken place since the Han period and shows how Chinese evolved into a more analytic language supporting her exposition with abundant examples She draws where possible on archaeological findings in order to distinguish between versions of texts transmitted and sometimes modified through the hands of generations of copyists The author focusses on syntactic issues including word order verbs causative structures resultative compounds and negation but also pays close attention to what she demonstrates are closely related changes in phonology and the writing system The book will interest scholars and graduate students of Chinese linguistics philology classical literature as well as general linguists interested in word order typology and language universals It may be also be used as a text for advanced courses in Classical Chinese and Chinese diachronic syntax
