Grasslands Scientists:

Grasslands and Grassland Sciences in Northern China National Research Council, Policy and Global Affairs, Office of International Affairs, Committee on Scholarly Communication with the People's Republic of China, 1992-02-01 This volume describes one of the most extensive grassland ecosystems and the efforts of Chinese scientists to understand it Leading Chinese scientists attribute the decline in China's grasslands to overgrazing and excessive cultivation of marginal areas and discuss measures to limit the damage The book gives its view on the Chinese approach to the study of grasslands and the relevance of this activity in China to global scientific concerns Grasslands Stephen Reynolds, John Frame, 2005-01-07 This book looks at significant current grassland problems and issues and provides an insight into grassland productivity in diverse areas of the world with their various production systems There is a focus on recent technical advances and the prospects for further innovation through twenty one chapters by eminent grassland scientists grouped into seven sections forage germplasm forage conservation grass based systems and organic production climate change biodiversity and biotechnology geographical information systems farmer and pastoralist participation and regional developments The book is timely in view of the expanding human and livestock populations especially in arid and semi arid environments with the consequent pressure on the world's grasslands Grasslands Jeri Freedman, 2009-01-15 This book on the grasslands explains how much of the regions of the world and America are composed of this teeming biome Grassland Food Chains Buffy Silverman, 2010-09 Explores the species and food chains within a grassland habitat and discusses why these food chains need to be protected *Land Change Science, Political Ecology, and Sustainability* Christian Brannstrom, Jacqueline M. Vadjunec, 2014-01-23 Recent claims regarding convergence and divergence between land change science and political ecology as approaches to the study of human environment relationships and sustainability science are examined and analyzed in this innovative volume Comprised of 11 commissioned chapters as well as introductory and concluding synthesis chapters it advances the two fields by proposing new conceptual and methodological approaches toward integrating land change science and political ecology The book also identifies areas of fundamental difference and disagreement between fields These theoretical contributions will help a generation of young researchers refine their research approaches and will advance a debate among established scholars in geography land use studies and sustainability science that has been developing since the early 2000s At an empirical level case studies focusing on sustainable development are included from Africa Central and South America and Southeast Asia The specific topics addressed include tropical deforestation swidden agriculture mangrove forests gender and household issues **Grasslands and Climate Change** David J. Gibson, Jonathan A. Newman, 2019-03-21 A comprehensive assessment of the effects of climate change on global grasslands and the mitigating role that ecologists can play **Scientific American Environmental Science for a Changing World** Anne Houtman, Susan Karr, Jeneen Interlandi, 2012-03-05 Environmental Science for a Changing World captivates students with

real world stories while exploring the science concepts in context Engaging stories plus vivid photos and infographics make the content relevant and visually enticing The result is a text that emphasizes environmental scientific and information literacies in a way that engages students **Application of Vegetation Science to Grassland Husbandry W.**

Krause,2013-11-11 WERNER KRAUSE INTRODUCTION GENERAL COMMENTS ON THIS VOLUME The subject Application of vegetation science to grassland husbandry is not limited by geographical boundaries It is proposed to cover this subject in an internationally applicable work of reference However to avoid omissions it would have to embrace all the diversity of grassland from the Arctic to the Equator The term application requires that the papers contained herein take into account both generally relevant scientific knowledge and the special needs of practical farming The latter are not satisfied solely by the laws of vegetation science the changing effects of the market politics the distribution of wealth and poverty highly developed technology and the continued use of archaic farming methods must all be considered To try to cover all this adequately in one volume of approximately 550 pages is a hopeless task The editor and the authors had to limit themselves to presenting a selection of problems and attempts to solve them with the aim that these examples should indicate how much vegetation science can contribute to grassland husbandry and the scope of this contribution is broadened by the references quoted The arrangement of the sections within this volume does not lend itself to specific suggestions for the management of individual systems However grassland husbandry can expect to obtain from this work an insight into some overall general relationships which could assist the adviser in the formulation of more specific improvement plans

Dove,Daniel M. Kammen,2015-04-24 In an era when pressing environmental problems make collaboration across the divide between sciences and arts and humanities essential this book presents the results of a collaborative analysis by an anthropologist and a physicist of four key junctures between science society and environment The first focuses on the systemic bias in science in favour of studying esoteric subjects as distinct from the

mundane subjects of everyday life the second is a study of the fire climax grasslands of Southeast Asia especially those dominated by *Imperata cylindrica* sword grass the third reworks the idea of moral economy applying it to relations between environment and society and the fourth focuses on the evolution of the global discourse of the culpability and responsibility of climate change The volume concludes with the insights of an interdisciplinary perspective for the natural and social science of sustainability It argues that failures of conservation and development must be viewed systemically and that mundane topics are no less complex than the more esoteric subjects of science The book addresses a current blind spot within the academic research community to focusing attention on the seemingly common and mundane beliefs and practices that ultimately play the central role in the human interaction with the environment This book will benefit students and scholars from a number of different academic disciplines including conservation and environment studies development studies studies of global environmental change anthropology geography sociology politics and science and technology studies
