About the Book This book predicts a future when the population of the world is near one hundred billion and on the verge of a super science All life will be at risk if testosterone driven males are still in charge of the monetary and power resources of the world In this future world the world government has passed strict laws that require castration of any male found guilty of any sexual assault or of using violence to commit any crime Regarding reproduction only one replacement child per adult is allowed A replacement child is not mandated but if one is cloned or otherwise brought into existence the parent is required to raise and support that child until it reaches the legal age of thirty Many men are refusing to make a replacement commitment in order to have the freedom to live their lives as they see fit and scientists are predicting the extinction of the human male now called a drone within the next three hundred years About the Author James B Dreme is the oldest of seven children He dropped out of high school during his junior year in order to join the service as the Viet Nam War was first heating up in the spring of 1965 After four years in the Navy he met the expectations of the church he was a fifth generation member of and fulfilled a successful two year mission After his mission he got engaged and started school at A S U After that he graduated from Arizona State University and taught school for a little under a decade Dreme then got divorced and re-enlisted for two more years in the Navy He became an aircraft structural mechanic second class petty officer and switched to teaching individual students in their homes until he retired

Authoritarian Gravity Centers Marianne Kneuer, Thomas Demmelhuber, 2020-05-19 Autocracies not only resist the global spread of democracy but are sources of autocratic influence and pressure This book presents a conceptual model to understand assess and explain the promotion and diffusion of authoritarian elements Employing a cross regional approach leading experts empirically test the concept of authoritarian gravity centers AGCs defined as regimes that constitute a force of attraction and contagion for countries in geopolitical proximity With an analysis extending across Latin America the Middle East Eastern Europe Central Asia and Asia these AGCs are shown to be effective as active promoters push or as neutral sources of attraction pull The authors contend that the influence of exogenous factors along with international and regional contexts for the transformation of regime types is vital to understanding and analyzing the transmission of autocratic institutional settings ideas norms procedures and practices thus explaining the regional clustering of autocracies It is the regional context in which external actors can influence authoritarian processes most effectively Authoritarian Gravity Centers is a vibrant and comprehensive contribution to the growing field of autocratization which will be of great interest to undergraduate and postgraduate students of comparative area studies illiberalism international politics and studies of democracy

Cyclic Repulsive Multiverse (MCR) Antonio Carlos Pinto, 2025-07-07 This work entitled The Cyclic Repulsive Multiverse Model CRM Modelo do Multiverso C clico Repulsivo MCR is not just a theoretical formulation It is the enunciation of a system of reality It is a carefully designed conceptual framework to challenge the current limits of cosmology by proposing an alternative reinterpretation of the genesis evolution and transition of universes not as isolated occurrences but as cyclical expressions of a gravitational

mechanism not yet fully understood The RCM does not emerge as an addition to already established theories but as an epistemological shift It inaugurates a new paradigmatic horizon where the forces governing the cosmos are not limited to traditional attractive gravity but coexist in dynamic equilibrium with a repulsive gravity of a radiant nature This force until now neglected or poorly understood is here elevated to the status of ontogenic engine of the cosmos capable of underpinning not only the acceleration of the expansion of the universe but also the interdimensional mechanisms that govern the gestation and ejection of entire realities At the heart of this model is the proposition that the observable universe did not emerge ex nihilo nor as an arbitrary product of a quantum vacuum but was expelled from an originating event of supra universal scale the Primordial Repulsive Explosion PRE This is not conceived as a destructive explosion but as an act of cosmic overflow a matrixial gesture in which a predecessor universe collapses not in the silence of extinction but in the potency of creation giving rise to a Daughter Universe through the repulsive ejection of inverted gravitational energy The structure of the RCM is based on entities such as the Super Cosmic White Hole conceived not as a metaphor but as a physical conceptual structure of inter universal transition This entity represents the matrix through which the new cosmos is gestated and projected assuming the role that the Big Bang until then occupied in an insufficiently explained way In the RCM the Big Bang is not the origin but the consequence not the beginning of everything but the continuity of a larger cyclical eternal flow Divided into 10 parts and structured into 33 chapters this work follows a rigorous logical cosmological progression starting with the foundations of classical physics Newton Einstein and advancing through contemporary discussions on dark matter dark energy primordial white holes emergent gravity Verlinde multiverse Hawking until culminating in the systematic exposition of inverse gravity a central principle proposed by Antonio Carlos Pinto Each section of this treatise sustains an internal interdependence articulating physical ideas theoretical conjectures observational consequences and philosophical implications RCM theory is rooted in sources of scientific legitimacy but its vocation is transgressive it rejects methodological dogmas and the limits imposed on rational imagination Rather than simply solving equations RCM seeks to reformulate questions This is not a book to be read only with the eyes of a technician or an academic It is a book to be read with the spirit of those who dare to think about the invisible to name what does not yet have a language and to model what until now was only cosmic intuition It is addressed to researchers and independent scholars philosophers of science and to all who recognize that genuine knowledge does not flourish where there is conformity but where there is restlessness What is offered here is not a theory of everything but rather a model of cosmological freedom a system where the universe is not absolute but one among others where time is a curve between gravitational pulsations where being far from being confined to a single world propagates itself across multiple planes realities and rhythms The RCM is in essence an ontological act a call to reconnect with the first causes A philosophical return to the arch where science and metaphysics intertwine in the search for a cosmological logos that can account for the vastness that we intuit but do not yet understand Let this work therefore not be

taken merely as speculation But as an inaugural gesture of thought a beginning of a dialogue between the finite mind and the infinite that surrounds it *Global Gravity Field and Its Temporal Variations* Richard H. Rapp, Anny A. Cazenave, R.S. Nerem, 2012-12-06 In July 1995 the XXI General Assembly of the International Union of Geodesy and Geophysics was held in Boulder Colorado At this meeting the International Association of Geodesy IAG organized a number of symposia to discuss scientific developments and future directions in a number of areas One of these symposia was G3 Global Gravity Field and Its Temporal Variations This symposium consisted of four invited and 36 contributed papers The contributed papers were given as oral or poster presentations This proceedings volume represents the written contributions of the four invited papers appearing as the first four papers in the volume and 19 additional papers The authors were asked to limit the length of their paper to approximately ten pages which in some cases did limit what an author wanted to say The papers in this volume have been placed in the same order as they were presented at the ruGG meeting A key theme of the symposium is given in the paper by Nerem Klosko and Pavlis where they discuss applications of gravity field information in geodesy and oceanography The significant achievements in determining the gravity field in the ocean areas from satellite altimeter data is discussed by Sandwell Yale McAdoo and Smith A review of time changes of the Earth s gravity field from terrestrial measurements is given by Lambert et al and from satellite perturbation techniques by Eanes and Bettadpur A description of new geopotential models is given in the paper by Tapley et al **Scientific American** ,1878 **Astronomical investigations.
