Global Environmental Change Committee on Global Change Research, Policy Division, Policy and Global Affairs, National Research Council, 1999-09-28 How can we understand and rise to the environmental challenges of global change? One clear answer is to understand the science of global change not solely in terms of the processes that control changes in climate and the composition of the atmosphere but in how ecosystems and human society interact with these changes. In the last two decades of the twentieth century a number of such research efforts supported by computer and satellite technology have been launched. Yet many opportunities for integration remain unexploited and many fundamental questions remain about the earth's capacity to support a growing human population. This volume encourages a renewed commitment to understanding global change and sets a direction for research in the decade ahead. Through case studies the book explores what can be learned from the lessons of the past 20 years and what are the outstanding scientific questions. Highlights include Research imperatives and strategies for investigators in the areas of atmospheric chemistry, climate ecosystem studies and human dimensions of global change. The context of climate change including lessons to be gleaned from paleoclimatology. Human responses to and forcing of projected global change. This book offers a comprehensive overview of global change research to date and provides a framework for answering urgent questions.

Geography in America at the Dawn of the 21st Century Gary L. Gaile, Cort J. Willmott, 2005 Geography in America at the Dawn of the 21st Century surveys American geographers' current research in their specialty areas and tracks trends and innovations in the many subfields of geography. As such it is both a state of the discipline assessment and a topical reference. It includes an introduction by the editors and 47 chapters each on a specific specialty. The authors of each chapter were chosen by their specialty group of the American Association of Geographers AAG. Based on a process of review and revision the chapters in this volume have become truly representative of the recent scholarship of American geographers. While it focuses on work since 1990 it additionally includes related prior work and work by non-American geographers. The initial Geography in America was published in 1989 and has become a benchmark reference of American geographical research during the 1980s. This latest volume is completely new and features a preface written by the eminent geographer Gilbert White.

Assessing Vulnerability to Global Environmental Change Richard J. T. Klein,Anthony G. Patt,2012-05-16

Assessing the vulnerability of human populations to global environmental change particularly climate change is now the main imperative of research and international action However much of the research into vulnerability is not designed to feed directly into decision making and policy creating a gap between the knowledge created by researchers and what is required by decision makers This book seeks to rectify this problem and bridge the gap It discusses vulnerability as the central theme and brings together many different applications from disaster studies climate change impact studies and several other fields and provides the most comprehensive synthesis of definitions theories formalization and applications to date illustrated with examples from different disciplines regions and periods and from local through to regional national and international levels Case study topics cover sea level rise vulnerability to changes in ecosystem services assessing the vulnerability of human health and double exposure to climate change and trade liberalization amongst other issues Research outcomes stress that science policy dialogues must be transparent to be effective and concentrate on a mutual understanding of the concepts used A key research finding is that the most useful information for decision makers is that which shows the separate causes and drivers of vulnerability rather than presenting vulnerability in an aggregated form The book concludes with a unifying framework for analysing integrated methodologies of vulnerability assessment and guiding how research and policy can be linked to reduce vulnerability

informs a call for new transformative approaches to research policy and action. The chapters in this book include critical analyses, case studies and reflections on contemporary environmental and social challenges with a strong emphasis on those related to climate change. Human thoughts and actions have contributed to an environment of insecurity manifested as multiple interacting threats that now represent a serious challenge to humanity. Yet humans also have the capacity to collectively transform the economic, political, social and cultural systems and structures that perpetuate human insecurities. These fresh perspectives on global environmental change from an interdisciplinary group of international experts will inspire readers, whether students, researchers, policy makers or practitioners, to think differently about environmental issues and sustainability. The contributions show that in a changing environment, human security is not only a possibility but a choice.
