The Crisis of Global Environmental Governance Jacob Park, Ken Conca, Matthias Finger, 2008-03-27. More than twenty years after the Brundtland Commission report *Our Common Future*, we have yet to secure the basis for a serious approach to global environmental governance. The failed 2002 World Summit on Sustainable Development showed the need for a new approach to globalization and sustainability. Taking a critical perspective rooted in political economy, regulation theory, and post-sovereign international relations, this book explores questions concerning the governance of environmental sustainability in a globalizing economy. With contributions from leading international scholars, the book offers a comprehensive framework on globalization, governance, and sustainability and examines institutional mechanisms and arrangements to achieve sustainable environmental governance. It considers current failures in the framework of global environmental governance, addresses the problematic relationship between sustainability and globalization, explores controversies of development and environment that have led to new processes of institution building, examines the marketization of environmental policy making, stakeholder politics, and environmental policy making, socio-economic justice, the political origins of sustainable consumption, the role of transnational actors, and processes of multi-level global governance. This book will be of interest to students and researchers of political science, international studies, political economy, and environmental studies.

Learning to manage global environmental risks. 2. A functional analysis of social responses to climate change, ozone depletion, and acid rain Social Learning Group, 2001. This long-awaited two-volume book examines how the interplay of ideas and actions applied to environmental problems has laid the foundations for global environmental management. It looks at how ideas, interests, and institutions affect management practice; how management capabilities in other areas affect the ability to deal with specific environmental issues; and how learning affects society's approach to the global environment. The book focuses on efforts to deal with climate change, ozone depletion, and acid rain from 1957 (The International Geophysical Year) through 1992 (the UN Conference on Environment and Development). The settings include Canada, Germany, Hungary, Japan, Mexico, the Netherlands, the former Soviet Union, the United Kingdom, the United States, and international environmental organizations. Topics include problem framing, agenda setting, issue attention, risk assessment, monitoring, option assessment, goal and strategy formulation, implementation, and evaluation. Volume 1 provides an overview of the project of global environmental management in general and of the three central environmental issues studied; it also contains the individual country studies. Volume 2 contains the management function studies and the book's conclusion. Authors in the set include Jeannine Cavender Bares, William C. Clark,
