New Norms and Knowledge in World Politics Preslava Stoeva, 2009-10-16 This book examines the process of norm development and knowledge creation in international politics and assesses these processes in case studies on protection from torture intellectual property rights and climate change Drawing on the theories of constructivism and the sociology of scientific knowledge author Preslava Stoeva demonstrates that international norms are a product of a sequence of closures and consensus reached at different social levels She contends that it is this process which makes norms permeate the social and political fabric of international relations even before they become official principles of state behaviour Proposing a theoretical model which indicates the stages of the development of norms she studies the roles

groundbreaking book collects contributions from many of the world's leading climate and energy law scholars and provides the first major study of national Climate Change Acts. This cutting edge type of legislation originated with the first Climate Change Act framework which was passed in the United Kingdom in 2008 and is intended to enable the law to grapple effectively with one of the great problems of our times: anthropogenic climate change. Since 2008 national framework climate legislation has been slowly but steadily emerging in countries across the world. This trailblazing collection employs a comparative analytical legal methodology and offers the first comprehensive study of this new innovative form of legislative regime. In addition to containing broad internationalist chapters, deep dive national case study chapters are included that focus on individual countries and provide analytical depth. A final chapter draws together the threads of the book's foregoing contributions to deduce generalisable conceptual insights based on current knowledge and experience. Uniquely, the book provides a conceptual model for Climate Change Acts that can usefully inform the development of national framework climate legislation in all countries.

Sedimentary Coastal Zones from High to Low Latitudes I.P. Martini, H.R. Wanless, 2014-10-24. We live in a world where the loss of sea ice and thawing of coastal grounds in the north and renewed marine transgression and an increase in the frequency of extreme weather events globally are becoming commonplace. This volume presents a timely examination of coasts: the geological environment at particular risk as global warming brings on this new reality. In 23 papers, low-lying mainly siliciclastic coasts are reviewed, described and analysed under a variety of climates in quasi-stable tectonic settings along passive trailing continental edges from Polar Regions to the Tropics. Examples include coast of the Arctic seas, temperate to tropical eastern shores of the Americas, western Portugal, Mediterranean, Persian Gulf, South Africa and Australia. The entire coastal zone landscape is considered, ranging from geophysical processes and products to biological entities, including the adaption of Native People in various climatic zones. Knowledge of the state of the coasts now and how the coastal plain has evolved since Late Pleistocene is crucial for any realistic planning for the future.

It is the first and only presentation of German practice in international law in English. The book combines a case study approach, providing analysis and commentary on Germany's practice, with a classic digest of primary materials, including diplomatic correspondence, statements and court decisions.
