

Debate on Global Warming

Global Warming is a hot issue ever discussed. Many climate experts have argued that there has been a slowdown in rising global temperatures, but numerous studies have disproved this claim.

Global Warming results in a warm climate because of which glaciers are melting which is causing the rise in the sea level. When the level of the sea rises, it destroys some of the plants emerging them in water.

When the level of the sea rises, it causes danger to the people living in coastal areas. People will also lose their homes in sea waves. In other words, the whole food chain will get affected if nothing is done on time to stop global warming.

Though growing seasons in some areas will alter a change, the impacts of drought, severe hot and cold weather, accumulated snowmelt, diversity of pests, lower groundwater tables and a loss of favourable land will cause severe crop failures.

One of the effects of Global Warming is an increase in mosquito-borne diseases like malaria and dengue fever, as well as a rise in cases of chronic conditions like asthma, which are the direct result of global warming.

Melting of glaciers results in rising sea levels and severe droughts that cause more dramatic water shortages and continue to increase the risk of wildfires in jungles.

appreciate the effects of human activity and greenhouse gases around the world and to learn the history of climate change and the research enterprise examining it This edition was well received with notable reviews Since its publication the debate over the advent of global warming at least partially brought on by human enterprise has continued to ebb and flow depending literally on the weather politics and media coverage of climate summits and debates Advances in research also change the discourse as new data is collected and new scientific projects continue to explore and explain global warming and climate change Thus a new Second Edition updates more than half of the original entries and adds new perspectives and content to keep students and researchers up to date in a field that has proven provocatively lively An Examination of the Views of Religious Organizations Regarding Global Warming United States. Nanda, 2012-09-30

There is a broad consensus that climate change presents the international community with a formidable challenge Yet progress on all fronts prevention mitigation and adaptation has been slow Ved P Nanda finds an explanation for this disparity in the sharp divide between the developed and developing countries Developing countries demand that major industrialized nations provide the necessary resources and technology to address climate change while many developed countries seek firm commitments and timetables on action from the developing countries The result is a stalemate Climate Change and

Environmental Ethics contains first rate research and thinking from scholars from multiple disciplines ethics ecology philosophy economics political science history and international law What distinguishes this volume from recent work on climate change are two of its special features One is the multi disciplinary backgrounds of the scholars their stellar experiences and the wisdom with which they express not simply their philosophy and theory but also their suggestions for concrete specific action in practical terms The second is the special niche this volume fills in its overarching theme of the need for a renewed environmental ethic that can bring together these disparate but interconnected views This volume explores alternative ways of conceiving our relation to the natural world A spirit of international cooperation and collaboration is needed to meet the challenge The reader is compelled to think anew about our understanding of the scientific and technical issues as well as our values and ethical responsibilities regarding climate change *Be Very Afraid* Robert Wuthnow,2010-04-07 Disputes the view that fear of peril results in denial and argues that a more common response is to do things to overcome our sense of vulnerability even if these things are ineffective
