**Governmental Response to Environmental Challenges in Global Perspective** Joseph G. Jabbar, O. P. Dwivedi, 1998 In our drive to improve human standards of living we have paradoxically paid scant attention to the need for clean air and water the impact of acid rain on agriculture lakes and rivers the effect of pollutants on the ozone layer the safe disposal of hazardous wastes and the relationship between population growth and the environment It seems that every time governments are faced with an apparent choice between economic development and the protection of the environment priority is always given to the former Short term plans dictated by canons of political survival and expediency always seem to take precedence over long term strategies with politicians and decision makers deftly relegating environmental concerns to the realm of rhetoric This book is an effort to better understand the problems faced by our global ecosystems It is also the result of the authors deep commitment to urge both citizens and their leaders the world over to work together for a better protection of the environment so that our planet may be saved for the present and for future generations

**Ethical Choices and Global Greenhouse Warming** Lydia Dotto, Calgary Institute for the Humanities, 1993-08-23 There are many things we can choose to do about climate change including doing nothing at all All of them have consequences many of which will be unforeseen If we could foretell more accurately what would happen to the climate in the future our choices might be clearer if not necessarily easier to make Unfortunately predicting future climate change is fraught with uncertainty and we will be forced to make choices in the face of that uncertainty To what extent are we motivated in this difficult process by a desire to do the right thing And how do we decide what is the right thing to do The answer to these questions depends on whose ethical interests are considered What is best for a Canadian living in the last decade of the twentieth century even supposing we could discover what that is might not be best for a Somali or for our great grandchildren or for the rain forest of the Amazon or the kangaroos of Australia Decisions about what to do about global warming will therefore be influenced by how much relative weight we give to the ethical interests of Canadians Somalis grandchildren rain forests kangaroos and a host of other variables Weighing these competing interests is

an exercise in applied ethics This book examines the role that ethics can and should play in our decisions about how to deal with global warming *Global Challenges* Angela Churie-Kallhauge, Gunnar Sjöstedt, Elisabeth Corell, 2017-09-08 The World Summit on Sustainable Development WSSD in Johannesburg 2002 was the latest conference in an international process to manage environment and development issues that can be traced back to the late 1960s Three milestones mark this 30 year process of social and political interaction the United Nations Conference on the Human Environment UNCHE held in Stockholm in 1972 the first international meeting at a high political level convened to address environmental issues the 1992 United Nations Conference on Environment and Development UNCED held in Rio de Janeiro and the WSSD which attempted to set policy goals and targets for the global environmental and developmental challenges previously identified But what did the WSSD achieve Following the summit there have been various opinions of its significance and its outputs many of them negative This book argues that there is a need to place the WSSD in its broader context Understanding the connections between the WSSD and its precedents as well as those between this overall process and individual environmental decision making processes such as on climate change and how they all contribute to the overall global policy process adds a critical dimension to the analysis of the WSSD outcomes This book examines the challenges facing the global policy process for sustainable development as it continues beyond Johannesburg into the future It combines a forward outlook with a historical perspective in tracing the evolution of selected cross cutting themes on the agenda of the three conferences the institutions and formal results of the process and the actors and their patterns of interaction over time The focus is on the decision making dimension the multilateral negotiations which can be seen as the development over time of a pattern of interlinked political activities *Global Challenges* has four operational objectives first to define the ongoing process that formally began with the Stockholm Conference in 1972 and evolved towards its latest major manifestation at the WSSD second to present some dynamics of the Stockholm Rio Johannesburg SRJ process by exploring the themes identified third to introduce an approach on how to consider the outcomes of this process as a way of reflecting on what the process has actually accomplished and finally to discuss lessons learned for theory and practice from this exercise The practical lessons include reflections on how the continued SRJ process should best be organised and supported into the future The book takes a uniquely broad outlook and interdisciplinary approach in addressing important lessons relating to the emergence of substantive issues as well as to process and institutional dynamics It is a bridge building exercise from academic analysis to long term strategic thinking in environmental regime building *Global Challenges* provides a new perspective on the continuing and increasingly complex global environment and development policy process and analyses the interlinkages between the process trends and cross cutting issues that set the conditions for the global efforts to achieve sustainable development It will be essential reading for academics and practitioners interested in seeing the big picture of the global challenges facing people and planet in the 21st century **Engineering and Environmental Challenges** National

Academy of Engineering,2002-06-29 Dealing with the challenges presented by climate change or rapid urban development require cooperation and expertise from engineering social and natural sciences Earth systems engineering is an emerging area of multidisciplinary study that takes a holistic view of natural and human system interactions to better understand complex systems It seeks to develop methods and tools that enable technically sound and ethically wise decisions Engineering and Environmental Challenges presents the proceedings of a National Academy of Engineering public symposium on Earth systems engineering
