A Liberal Actor in a Realist World Andreas Goldthau,Nick Sitter,2015 Since 1992 the European Union has put liberalisation at the core of its energy

policy agenda This aspiration was very much in line with an international political economy driven by the neo liberal Washington consensus The central challenge for the EU is that the energy world has changed while the EU has not The rise of Asian energy consumers China and India more assertive energy producers Russia and the threat of climate change have securitized the IPE of energy and turned it more realist The main research question is therefore What does a liberal actor do in a realist world The overall answer as far as the EU is concerned is that it approaches energy challenges as a problem of market failure imperfect competition on the supply side inadequate supply of public goods on the demand side and in terms of infrastructure and large externalities that arise both from non energy events and from large scale consumption of fossil fuels A Liberal Actor in a Realist World assesses the changing nature of the global political economy of energy and the European Union's response and the external dimension of the regulatory state The book concludes that the EU's soft power has a hard edge which is derived primarily from its regulatory power This works best when it targets companies rather than governments and it is more effective in the Near Abroad than at the global level This makes the EU emerge an actor in its own right in the global political economy of energy a Regulatory Power Europe

such as regulating labour markets and inter firm competition geographical indications and local economic development Overall the book s aim is to advocate a mode of thinking and research which challenges orthodox and dominant approaches to economics and its politics It does so by placing a politics that is comprehensible and therefore both studyable and actionable back at the centre of reflection about the economic and the political
