

Functions of Glycoproteins

– Membrane-bound glycoproteins

➤ Specific sites for **recognition** by other cells, hormones, viruses... (information-rich oligosaccharide)

➤ cell surface **antigenicity** (such as the blood group antigens)

Glycoprotein Cell Receptors

Surface carbohydrates on cells serve as points of attachment for other cells, infectious bacteria, viruses, toxins, hormones and many other molecules.

Glycoproteins And Human Disease:

Glycoproteins and Human Disease Inka Brockhausen, William Kuhns (M.D.), 1997 Describes glycoprotein structural abnormalities in disease as related to their biosynthesis and reviews the current knowledge on glycan structures and functions and their biosynthesis in a wider context Subjects include control mechanisms in the biosynthesis of N and O glycans glycoproteins and cell adhesion functions the role of the immune and blood coagulation systems growth and hormone related functions of glycoproteins and cell surface receptors glycosylation in blood disorders and cystic fibrosis and the role of glycoproteins in various types of cancer Annotation copyrighted by Book News Inc Portland OR **Glycoproteins and**

Human Disease Inka Brockhausen, William Kuhns, 2013-11-21 Diverse alterations of glycosylation occur in diseases such as cancer metastasis leukemia inflammatory and other diseases The glycosylation abnormalities found in disease are the result of complex rearrangements of the oligosaccharide assembly by glycosyltransferases This volume reviews several mechanisms that may underly the extremely complex alterations in disease Disease specific glycosylation may contribute to the disease process by altering cellular functions or may be exploited therapeutically Specific therapy may be aimed at correcting glycosylation abnormalities based on knowledge of the mechanisms leading to the disease phenotype and the three dimensional interactions between carbohydrates and carbohydrate binding molecules Research Awards Index ,1989

Hughes,1983-03-31 The student of biological science in his final years as an undergraduate and his first years as a graduate
is expected to gain some familiarity with current research at the frontiers of his discipline New research work is published in
a perplexing diversity of publications and is inevitably concerned with the minutiae of the subject The sheer number of
research journals and papers also causes confusion and difficulties of assimilation Review articles usually presuppose a
background know ledge of the field and are inevitably rather restricted in scope There is thus a need for short but
authoritative introductions to those areas of modern biological research which are either not dealt with in standard
introductory textbooks or are not dealt with in sufficient detail to enable the student to go on from them to read scholarly
reviews with profit This series of books is designed to satisfy this need The authors have been asked to produce a brief
outline of their subject assuming that their readers will have read and remembered much of a standard introductory textbook
of biology This outline then sets out to provide by building on this basis the conceptual framework within which modern
research work is progressing and aims to give the reader an indication of the problems both conceptual and practical which
must be overcome if progress is to be maintained *The Journal of Immunology* ,1987 Airway Mucin Glycoproteins in
